An oily, aromatic, resinous substance, exuding spontaneously from trees of the genus *Balsamodendron*, hence, by extension, any aromatic or odoriferous exudation

from trees or shrubs, whether spontaneous or after incision; *balm*. A great variety of substances pass under this name, but in chemistry the term is confined to vegetable juices, whether they remain liquid or spontaneously become solid, which consist of resins mixed with gums or volatile oils, the resins being produced from the oils by oxidation. A balsam is thus intermediate between a volatile oil and a resin. It is soluble in alcohol and ether, and capable of yielding benzoic acid. The balsams are either liquid or solid of the former are the balsam of Gilead and the balsams of copaiba, Peru, and Tolu (see below) of the latter, benzoin, dragon's blood, and storax. The balsam used in the Roman Catholic Church in the consecration of chrism is, by the rubric that of Syria or Mecca but, from difficulty in obtaining this, concessions have been made by the popes for the use of the balsams of Brazil, Tolu, Peru, etc.

Many of the resins occur in plants dissolved in ethereal oils. Should the vessels which contain this solution be injured, it flows out, and becomes thick, or even solid on exposure to the air, partly from evaporation of the solvent oil, and partly by its oxidation. Such mixtures of oils and resins are termed *balsams*.

An institution for receiving and lending money.

The banking institutions of the United States may be classed as *national* and *State banks*, *savings banks*, *private banks* or *bankers*, and *loan and trust companies*. National banks were first authorized by a law of the United States enacted in 1863, for a term of twenty years. In 1864 another act was adopted (allowing the like term of twenty years) which was thereafter known as the *National Bank Act*. In 1865 they were authorized to continue twenty years longer. They receive, lend, and transmit money, and issue notes which are used as money, and buy, sell, and collect bills of exchange. Their circulating notes are secured by United States bonds deposited with the government, and their operations are subject to the inspection and supervision of the Comptroller of the Currency. State banks perform the same functions except that of issuing notes. The notes of the State banks were taxed 10 per cent by Congress in 1865, in order to cause their retirement, which was speedily accomplished. Private banks and bankers carry on the same business as State banks. Some times one person constitutes a private bank, but generally several persons associate together and form a partnership. Loan and trust companies are incorporated institutions, and receive deposits, usually for a fixed period, and loan them on the pledge of stocks, bonds, and other securities, while national and State banks lend largely on the promises of the borrowers; they have also a capital which is subscribed and paid by the stockholders. Savings banks receive money and lend it chiefly on the security of real estate. See *savings bank*. In Europe several great national banks are intimately associated with the fiscal departments of the governments of their respective countries, as the Bank of England and the Bank of France. Banks of issue are such as issue notes that circulate as currency. In London and for sixty-five miles around no bank having more than ten partners save the Bank of England, is allowed to issue its own notes.

5 The office in which the transactions of a banking company are conducted.—*Bank-charter Act*, an English statute of 1844 (7 and 8 Vict. c. 32) defining the powers of the Bank of England in respect to the issue of notes and the amount of bullion reserve. Its object was to avoid the danger of the over issue of circulating notes, which it accomplished by fixing a limit to the amount of bullion held by the bank. It also regulated the issue of notes by other banks. Also known as the *Peel Act*, and *Sir Robert Peel's Act*—*Bank discount*, see *discount*—*Bank men*, in *U. S. hist.* supporters of the second United States Bank in its contest with President Jackson. Two institutions have been chartered by Congress under the title Bank of the United States, having their seat in Philadelphia, and intimately connected with the national finances. The charter of the first, granted in 1791, expired in 1811, its renewal having been refused. The second lasted from 1816 to 1836 under the national charter, and was continued for a time as a State bank. The opposition of President Jackson to the renewal of its charter, and his removal of the government deposits from it in 1833, led to a violent political contest, in which his course was ultimately sustained.—*Bank of issue*, a bank or banking company duly authorized by law to issue bank-notes of its own.—*Bank post-bill*. See *bills*—*Days in bank*. See *day*—*National Bank Act*, an act of Congress of 1864, providing for the organization throughout the

United States of banks whose circulating notes were required to be secured by a deposit of United States bonds, which resulted, as was intended, in providing a market for a very large government loan, and at the same time a secure currency equally acceptable in all parts of the country. **Penny-banks Act**, an English statute of 1869 (22 and 23 Vict. c. 51) authorizing the investing of the funds of penny savings banks, charitable societies etc., in the money of established savings banks. — **To break the bank**, to win, as in faro, from the management a certain sum which has been fixed upon as the limit which the bank is willing to lose in a single day. **To play against the bank**, to take the risks of a game, as rouge et noir or faro, in opposition to its manager.

Formerly, only a trader could be made a bankrupt under the bankruptcy laws, other persons who were unable to meet their obligations being *judgmental*. The distinction was abolished in the United States in 1841 and in Great Britain in 1869. In the United States Congress has the power of enacting bankruptcy laws which shall be uniform throughout the country. These laws are administered by the federal

courts. Laws having similar objects, but less efficacious in respect of discharging the debtor, are maintained by many of the States, but can operate to give a discharge irrespective of creditors' assent only when there is no federal bankruptcy law. These are termed *fraudulent laws*. In England bankruptcy laws have existed from the time of Henry VIII. The principal acts are 34 and 35 Hen VIII, c. 4, directed against fraudulent debtors, and empowering the lord chancellor and other high officers to seize their estates and divide them among the creditors, 13 Eliz, c. 7, restricting bankruptcy to traders, and prescribing certain acts by committing which a trader became a bankrupt, 4 Anne, c. 17, and 10 Anne, c. 15, removing the criminal character borne by bankruptcy proceedings up to that time, and permitting a debtor to obtain a certificate of having conformed to the requirements of the bankrupt law, 6 Geo IV, c. 16, allowing a debtor to procure his own bankruptcy, and introducing the principle of private settlements between debtors and creditors, 1 and 2 Wm IV, c. 56, establishing a court of bankruptcy, consisting of six commissioners along with four judges, as a court of review, and making provision for official assignees. By the Bankruptcy Consolidation Act of 1849, proceedings might be begun by petition to the Court of Bankruptcy, and the commissioners were authorized to award certificates according to the merit of the bankruptcy. The bankruptcy act of 1861 (24 and 25 Vict, c. 134) abolished special legislation relating to insolvent debtors, and permitted persons other than traders to avail themselves of the relief afforded by the bankruptcy court. In 1869 (32 and 33 Vict, c. 71) the commissionerships and official assignees were abolished, a new Court of Bankruptcy was established, and provision was made for the appointment of trustees who should be creditors. The Court of Bankruptcy was also stripped of its criminal jurisdiction, the criminal clauses being placed in another statute, the Debtors Act, which abolished imprisonment for debt except in certain cases. In 1883 (46 and 47 Vict, c. 52, taking effect Jan. 1, 1884) the English bankruptcy acts were amended and consolidated. In the United States the subject has been, except during the periods of the operation of the United States bankruptcy acts, left to the imperfect regulation of diverse State laws. Such a law in any particular State may, when there is no United States act conflicting, provide for the distribution of an insolvent's property, may discharge him from imprisonment for debt, and may discharge him, if a citizen of such State, from indebtedness to another citizen thereof contracted while such State law was in force, so far as to make the discharge a protection in the courts of the same State. The first United States bankruptcy law, known as the act of 1800 (2 Stat at L, p. 19), was based on a consolidation of then existing English statutes, and was in force from June 2, 1800, till Dec. 19, 1803. The second, the act of 1841 (5 Stat at L, p. 440), was in force from Feb. 1, 1842, till March 3, 1843. The third, the act of 1867 (14 Stat at L, p. 517), repeatedly amended, and finally revised in the United States Revised Statutes tit. LXI, and reenacted with modifications in 1874 (18 Stat at L, p. 178) was in force from June 1, 1867, till Sept. 1, 1878. A fourth was enacted in 1898. In general, debts contracted by fraud, or in a fiduciary capacity, are not discharged by the bankruptcy laws. **Commission of bankruptcy,** a commission formerly issued by the English lord chancellor, appointing and empowering certain persons to examine into the facts relative to an alleged bankruptcy, and to secure the bankrupt's property for the creditors. **Discharge in bankruptcy.** See *discharge*. **Flat in bankruptcy.** See *flat*. **Fraudulent bankruptcy.** See *fraudulent*. **Involuntary bankruptcy,** bankruptcy adjudged on the petition of creditors, showing cause why the bankrupt should not be allowed to continue in possession of his assets. **Voluntary bankruptcy,** bankruptcy adjudged on the petition of the debtor, indicating his desire to surrender his assets and be discharged. **Syn.** In *solventcy*, etc. See *failure*.

One who is bannered or entitled to a banner, specifically, a knight of a certain grade in the military hierarchy of the middle ages. Originally the right to display a banner (as distinguished from a pennon) was limited to those who could bring a certain array of followers into the field, and who had also been dubbed or accented knight. As the military distinctions of earlier feudalism became confused by the employment of paid soldiers, the right of displaying a banner became more and more a reward for distinguished prowess in battle. After a victory or a notable achievement at a banneret clout (carrying his pennon in his hand was, it is said, conducted between two knights of note, and presented to the king or general who cut off the point or ends of his pennon, making it square. He was then called a knight of the square flag. Also called *knight banneret*.

baptism (bap'tizm), *n.* [*ME* *baptisme* (usually and earlier *baptm*, *baptym*, *baptm*), *OF* *baptesme*, *baptme*, *batesme*, *baleme* (mod *F* *baptême*), *LL* *baptisma*, *Gr* βαπτισμα, also βαπτισμός, *Gr* βαπτίζω, dip or plunge in or under water, sink (a ship), drench, soak, draw (wine) by dipping with a cup, in *N T* and eccl, baptize] 1 A sacrament or ordinance of the Christian church, instituted by Christ as an initiatory rite, consisting in the immersion of the person in water, or in the application of water to the person by affusion or by sprinkling, by an authorized administrator, "in the name of the Father, and of the Son, and of the Holy Ghost." The proper signification of the rite, the proper subjects of it, and the proper methods of administering it, are matters of dispute in the Christian church. In Protestant churches it is generally regarded as a symbol of purification, a rite of initiation into the visible church of Christ, and a sign ratifying God's covenant with his people. In the Roman Catholic Church baptism is the sacrament of initiation into the church of Christ, consisting essentially in the application of water to the person baptized by one having the intention of conferring the sacrament, and who pronounces at the same time the words, "N I baptize thee in the name of the Father, and of the Son, and of the Holy Ghost." The Greek formula, "The servant of God is baptized in the name," etc., is also recognized as valid. In all branches of the church a layman may, in case of necessity, administer baptism. In the Roman Catholic, Greek, and most Protestant churches, infant children are admitted to baptism, but among the various Baptist denominations only those are admitted who give credible evidence of possessing a Christian experience. Among them, also, it is generally performed by immersion, which they regard as the Scriptural mode. This is also the common mode in the Eastern churches, in the Western churches sprinkling or pouring is commonly substituted. The Friends reject all baptism with water, regarding Christian baptism as spiritual only.

Baptism is not only a sign of profession, and mark of difference, whereby Christian men are discerned from others that be not christened, but it is also a sign of Regeneration or New Birth, whereby, as by an instrument, they that receive Baptism rightly are grafted into the Church, the promises of the forgiveness of sin, and of our adoption to be the sons of God by the Holy Ghost, are visibly signed and sealed, Faith is confirmed, and Grace increased by virtue of prayer unto God.

Articles of Religion of Ch. of Eng and Prot Eps Ch. We believe in baptism to be administered to be believers and their children, as the sign of cleansing from sin, of union to Christ, and of the impartation of the Holy Spirit. *Congregational Creed*, 1883

2. Any ceremonial ablution intended as a sign of purification, dedication, etc., as, the baptism administered by John the Baptist, or that administered to proselytes by the ancient Jews, the baptism or christening of bells, ships, and other objects in the Roman Catholic Church, etc.

The publicans justified God, being baptized with the baptism of John. *Luke vii 29*

Baptism for the dead, the baptism of a living person instead of and for the sake of one who has died unbaptized. The performance of such a ceremony, although disapproved by the church, is on record in a number of individual cases among the early Christians, and is also said to have been a custom of several ancient sects, the Ebionites, Marcionites, and others. In modern times it has been revived by the Mormons. This practice has been supposed by many to be alluded to in 1 Cor xv 29, but other explanations of the passage have been given. — **Baptism of blood**, martyrdom for the sake of Christ, regarded as supplying the absence of the sacrament of baptism. — **Baptism of desire**, the virtue or grace of baptism received by a person who dies earnestly desiring that sacrament, but unable to obtain it. — **Baptism of fire** (a) The gift or gifts of the Holy Spirit, the grace of baptism considered separately from the outer form. (b) Martyrdom. — **Clinic** or **clinical baptism**, baptism on a sick bed. In the early church this was allowed only in case of impending death, and was sometimes refused even then, except to persons already candidates. Such baptism was recognized as valid, but a person so baptized was not ordinarily eligible to orders, perhaps because it was judged that fear had induced the reception of the sacrament. — **Conditional baptism** (also called *hypothetical baptism*), in the Roman Catholic and Anglican churches, baptism administered to persons in respect to whom it is doubtful whether they have been baptized or not, or whose known baptism is of doubtful validity. The condition is then regularly inserted in the formula, "If thou art not baptized, etc." — **Private baptism**, baptism conferred in the home or elsewhere, without the ceremonies prescribed for the rite of solemn baptism in the church. — **Seal of baptism** (a) The rite of union in baptism. (b) Same as *baptismal character* (which see, under *baptismal*).

baptismal (bap-tiz'mal), *a.* [*Gr* baptism + *-al*, = *F* *baptismal*] Pertaining to baptism as, "the baptismal vow." *Hammond* — **Baptismal character**, a spiritual and indelible mark attaching to the souls of baptized Christians from their reception of the sacrament. This term is used officially by the Roman Catholic Church, and also by theologians of the Greek, Oriental, and Anglican churches, to express the doctrine of those churches that a baptized person can for good or for evil never be as one unbaptized, and that the sacrament cannot be repeated without sacrilege. Also called the

seal, or the *seal of baptism*. See *baptism*. — **Baptismal name**, the personal or Christian name given at baptism. — **Baptismal regeneration**, the doctrine of the remission of original and actual sin and the new birth into the life of sanctifying grace, in and through the sacrament of baptism. — **Baptismal shell**, a real shell polished, or a small metal vessel in the shape of a scallop shell, used to take water from the font and pour it upon the head of the candidate in baptism. — **Baptismal vows**, the promises made at baptism by the person baptized, or by the sponsors in his name.

baptismally (bap-tiz'mal-lī), *adv* In or through baptism, by means of baptism.

baptist (bap'tist), *n.* [*ME* *baptist* (only in reference to John the Baptist), *LL* *baptista*, *Gr* βαπτιστής, one who baptizes, *Gr* βαπτίζω, baptize. see *baptize*] 1 One who administers baptism: the title (with a capital letter) of John, the forerunner of Christ.

2 [cap] A member or an adherent of one of those Christian denominations which maintain that baptism can be administered only upon a personal profession of Christian faith. Generally, though not always, Baptists are immersionists. This doctrine has been held from a very early age of the Christian church, but the Baptists as a distinct denomination date from the epoch of the Reformation, and were originally called *Anabaptists* by their opponents. In the United States the Baptists owe their origin to Roger Williams, who was originally a minister of the Church of England. The principal Baptist denominations are the *Baptists*, sometimes called *Calvinist Baptists*, from their Calvinistic theology, *Freewill Baptists*, who are Arminian in theology and open communions in practice, *German Baptists*, popularly called *Dunkers*, *General Baptists*, a party of English Baptists who are Arminian in theology and hold to a general atonement (opposed to *Particular Baptists*, who are Calvinistic), *Old School Baptists*, sometimes called *Anti Mission* or *Hard Shell Baptists*, from their extreme Calvinism, which leads them to oppose all active measures for the conversion of the world (a sect numbering 40,000), *Seventh Day Baptists*, who keep the seventh day, instead of the first, as the sabbath, *Star-Principle Baptists*, so called from the six principles which constitute their creed (they practice "laying on of hands," and refuse communion to all who do not), *Disciples of Christ*, also called *Christians* or *Campbellites*, an American denomination growing out of the labors of Alexander Campbell, and separately organized in 1827, *Wesleyan Methodists*, or *Church of God* (organized in 1830 by John Winebrenner), who maintain the washing of feet as an ordinance of perpetual obligation, and *Christians*, or the *Christian Connection*, an American sect of Unitarian Baptists founded about 1800. The Baptists as a congressional in polity, and generally Calvinistic or semi-Calvinistic in theology. tise.] A building or a portion of a building in which is administered the rite of baptism. In the early Christian church the baptistry was distinct from the church building, and was situated near its west end; it was generally circular or octagonal in form, and dome-roofed. About the end of the sixth century the baptistry began to be absorbed in the church, within which the font was placed, not far from the western door. The detached baptistry was, however, often preserved, especially in Italy, and many such baptistries still remain in use, as that of St John Lateran in Rome, and those of the cathedrals of Pisa, Florence, etc. As a separate building the baptistry was often of considerable size and great architectural beauty. That of Florence is 108 feet in external diameter. In the West, baptisteries were in early times commonly dedicated to St John the Baptist. See *font* and *baptismal*.

Any one of the pieces of defensive armor used in medieval Europe to protect the horse. There is no record of any general use of such armor in antiquity or among the ancient peoples or in the European middle ages before the fifteenth century. The coupler or part covering the haunches, was added at the close of the fifteenth century, but after the wars of the Roses the bards reached their fullest development, and the upper part of the body of the horse was covered as completely with steel as the body of his rider. This grain has been cultivated from the very earliest times when it formed an important article of food as it still does where other cereals cannot be raised. It is largely employed for feeding animals but its chief use is in the manufacture of fermented liquors, as beer, ale, and porter and of whiskey. No other grain can be cultivated through so great a range of climate for it matures in Lapland, Norway, and Iceland, in 65 and 70 north latitude and at an altitude of 11,000 feet in the Andes and Himalaya. The only cultivated species that has been found wild is the two-rowed or long eared barley *H. distichon*, a native of western Asia but in cultivation in prehistoric times, as was also the six-rowed species, or white barley *H. hexastichon*. Of later origin is the common four-rowed species, spring or summer barley *H. vulgare*. Fan-shaped barley also called battledore or sprat barley *H. zebratum*, is perhaps only a cultivated form of the two-rowed species. Several varieties of these species are found in cultivation. The grain differs generally from wheat in retaining closely its husks. It is also somewhat less nutritious and palatable as an article of food. See *Hordeum*. **Caustic barley**, an early name for the seeds of *Schimaeanthus officinalis* called in medicine *sabudilla*, and used as a source of veratrum. **Mouse, wall, way, or wild barley**, *Hordeum murinum*, a grass of little value. **Patent barley**, the farina obtained by grinding pearl barley. **Pearl barley**, the grain deprived of husk and pellicle and completely rounded by grinding. It is made by attaching to the lever of a counterpoised barometer an arm with a pencil in contact with a sheet of paper, and moved uniformly by clockwork. The result is a continuous trace whose changes of form correspond to the variations of pressure. In another form a ray of light is made to traverse the upper part of the barometer tube and fall on a moving ribbon of sensitized paper, the rising and falling of the mercury in the barometer causing the beam of light to be increased or diminished in width thus showing the changes in the barometer by the continuous photographic record of the paper. In still another form the movement of the mercury column is used to close an electric circuit and thus report its movements. Also called *barometrograph*.

barometer (ba-iom'ē-tēr), *n* [*Gr* βάρος, weight, + μέτρον, a measure] An instrument for measuring the weight or pressure of the atmosphere, invented by Evangelista Torricelli, an Italian mathematician and physicist, in 1643. The simplest form of this instrument is a glass tube over 30 inches long, sealed at one end, and then filled with mercury. When the tube is inverted, with the open end dipping into a cup of clearest mercury, the column sinks, leaving a vacuum at the top (the pressure of the atmosphere on each unit of surface of the mercury in the cistern equals the weight of the column in the tube over each unit of surface of the horizontal section at the level of the mercury outside when the pressure of the column of mercury just

phon barometer having a float resting on the surface of the mercury in the open branch, and a thread attached to the float passing over a pulley, and having a weight at its extremity as a counterpoise to the float. As the mercury rises and falls the thread turns the pulley which moves the index of the dial. The barometer is used in many physical and chemical determinations, but its most ordinary applications are (1) to the prediction of changes in the weather, and (2) to the determination of the elevation of stations above the sea level. — **Aneroid barometer**, a portable instrument, invented by M. Vidi of Paris for indicating the pressure of the atmosphere without the use of mercury or other fluid. It consists of a circular metallic box which is exhausted of air, and of which the corrugated diaphragm is held in a state of tension by powerful springs. The varying pressure of the atmosphere causes a variation of the surface of the diaphragm, which variation, being multiplied by delicate levers and a fine chain wound around a pinion, actuates an index pointer which moves over a graduated scale. Bourdon's metallic barometer is an aneroid barometer consisting of a flattened, curved tube, ex-

hausted of air and having one end fixed and the other graduated to an index pointer which traverses a graduated arc. The curvature of the tube is affected by variations in the atmospheric pressure, and the pointer is moved correspondingly on the dial. — **Marine barometer**, a cistern barometer adapted to the conditions of a ship's motion, being suspended by gimbals, and having a siphon in the tube to lessen the oscillations of the mercury. — **Pumping of the barometer**, an unsteadiness in the barometric column, due to gusty wind. — **Self-registering barometer**, a barograph (which *see*). — **True height of the barometer**, the height of the barometer corrected to the standard density of mercury (that is, its density at the freezing point of water), for variations of gravity, for the effect of capillarity, index error, expansion of the scale, etc. The United States Signal Office also corrects for the elevation of the station above the sea level. *See atmosphere and siphonometer*.

barometer-flowers (ba-rom'ē-tēr-flou'ēr), *n* *pl* Artificial flowers colored with chlorid of cobalt. In dry air they are blue, and in moist air they turn pink.

barometer-gage (ba-rom'ē-tēr-gā), *n* An apparatus attached to the boiler of a steam-engine, to a condenser, or to some other chamber in which a more or less perfect vacuum is liable to be formed, to indicate the state of the vacuum. In one form a reversed U tube has one end plunged in a basin of mercury and the other connected with the vacuum chamber. Another common form is a U tube partially filled with mercury, and having one end open to the air and the other connected with the vacuum chamber. Any exhaustion in the chamber causes the mercury to rise in the leg connected with it and to fall in the other. The fluctuations are noted upon a scale placed between the two legs of the tube.

The children of barons have the title 'Honorable'. Originally the barons, being the feudatories of princes, were the proprietors of land held by honorable service. Hence in ancient records the word *barons* comprehends all the nobility. All such in England had in early times a right to sit in Parliament. Anciently barons were *graves*, such as held their lands of the king *in capite*, or *lesser*, such as held their lands of the greater barons by military service *in capite*. The present barons are—(1) *Barons by prescription*, for that they and their ancestors have immemorially sat in the Upper House. (2) *Barons by patent*, having obtained a patent of this dignity to them and their heirs, male or otherwise. (3) *Barons by tenure*, holding the title as annexed to land. (4) *Barons*, when all barons were not summoned to sit in Parliament, the name of *barons* by writ was given to those who actually were so summoned. Barons in the peerage of Scotland and Ireland have seats in the British Parliament only when elected by their order. *See peer*. The word *baron* was not known in the British Isles till introduced from the continent under the Norman princes. The coronet of a baron of England consists of a plain gold circlet, with six balls or large pearls on its edge, and with the cap, etc., as in a viscount's.

2 A British title of hereditary rank or degree of honor next below that of a baron, and thus not conferring a peerage, the only title of hereditary knighthood. A baronet is designated Sir so and so, Bart (Christian name and surname being given) and ranks above all knights except those of the Garter. There is no ceremony of investiture, the title being given by patent. The order was founded by James I in 1611, professedly to promote the English and Scotch colonization of Ulster, for which each baronet paid £1,080. The original limitation of the order to 300 members was set aside and the payment remitted at an early date. (For the badge of the order, see *badge of Ulster*, under *badge*.)

The title is abbreviated Bart after a name - *Baronet's hand*, the bloody hand of Ulster. See *badge of Ulster*, under *badge*. - *Baronets of Ireland*, an order of knights baronets founded by James I of England, in the seventh year of his reign (1619), for the same purpose and with the same privileges in Ireland as had been conferred on the order created in England in 1611. - *Baronets of Scotland*, an order instituted by Charles I of England in 1625. The nominal object was the settlement of Nova Scotia and patents were granted under the great seal of Scotland, as those of the Ulster baronets had been granted under the great seal of England. After the union of the crowns in 1707 the baronets of Scotland changed their arms with the badge of Ulster, and became baronets of the United Kingdom. The baronets of Scotland are often called Nova Scotia baronets. None have been created since the union.

forms, particularly in church architecture, and its contorted ornamentation, made up in great part of meaningless scrolls and inorganic shell work. Also called, sometimes, the *Jesuit style*, from the many and remarkably ugly examples supplied by churches founded by the Jesuit order. In English metrology there were four principal kinds of barrels: the wine barrel of 31½ wine gallons, the London ale barrel of 32 beer gallons, the country ale and beer barrel of 34 beer gallons, and the London beer barrel of 36 beer gallons. The wine barrel was legalized in the reign of Richard III; the others under Henry VIII. Under George III the barrel of ale or beer for town and country was made 36 gallons. Oil, spirits, tar, and pork were measured by the wine barrel, vinegar, by the barrel of 34 gallons. A barrel of cels or nettles contained 30 gallons by a statute of Henry VI, but by another of Edw IV this was made 12 gallons. Salmon and spruce beer were also measured by barrels of 42 gallons. A barrel of beef, wet codfish or hony contained 32 wine gallons, but hony was sometimes sold by barrels of 42 gallons of 12 pounds each. By a statute of George III a barrel of fish was made 38 wine gallons, but a barrel of salt pilchards or mackerel measured 50 gallons. The barrel of apples, coal or nuts contained 9 Winchester bushels, each of 8 gallons, dry measure. The barrel of anchors contained 16 pounds, of gunpowder, 100 pounds, of tins, 1 hundredweight of candles, 120 pounds, of ballins, potash, or butter, 2 hundredweight (but only 100 pounds of Essex butter, and 150 of Sussex), the barrel of soap, 250 pounds. A barrel of plates, by a statute of Charles II, contained 300 pounds. There were besides a great variety of other barrels in Scotland and Ireland. In England the barrel is no longer a legal measure. In the United States the barrel in liquid measure is commonly 31½ gallons, and for solid substances it is generally a unit of weight, a barrel of flour, for example, being 196 pounds, and a barrel of beef or pork 300 pounds. In Maine a barrel of fish is by law 200 pounds. In Louisiana a barrel in dry measure is ½ bushels. The bushels vary in different States. On the continent of Europe previous to the introduction of the metric system, there were many barrels. In each state of Italy the *barile* for wine was a little smaller than that for oil, they were about 30 to 60 liters. The *barrel* of Normandy was about 60 Paris pints. The *baril* of Montpellier was 25½ liters, the *barrillon* of Barcelona, 30½ liters, the *baril* of Riga, 197½ liters. The *barrique* was commonly larger than the *baril*. The abbreviation is *bbt*, pl *bbbs*.

3 The contents of a barrel sometimes, like *bottle*, used to signify intoxicating drink. 4 The money (especially when the sum is large) supplied by a candidate in a political campaign, for campaign expenses, but especially for corrupt purposes; hence, a *barrel* campaign is one in which money is lavishly employed to bribe voters in this sense often written and pronounced *bar'l* (barl), in humorous imitation of vulgar speech. Stone barrows in Scotland are called *carns*. The numerous barrows of North America are generally classed along with other ancient earthworks as *mounds*, or distinguished as *burial mounds*.

Whilst the term *tumulus* is almost exclusively used in speaking of the sepulchral mounds of the ancient Greeks, and the conical mounds formed by the Romans, adjoining their camps and stations, to serve as land marks and watching stations, it is used indifferently with the word *barrow* to designate the sepulchral mounds of the ancient inhabitants of this and other northern countries.

Olivin and nephelin are also often found in the basalts, especially the former. Apatite, leucite and hayneite are occasionally present. The basalts have been variously classed by different writers. Basalt proper is the dark, compact variety, breaking with a splintery fracture. Under the name *dolerite* are included all the more coarsely crystallized varieties in which the component minerals can be made out with the naked eye, while *anorthite* is the name given to those varieties which have a finely granular texture. In the modern eruptive regions basalt has almost always been the last rock to be emitted from the volcanic orifice. The cooling of lava often gives rise to the formation of hexagonal prisms or columns which are occasionally extremely regular in form and of great size. Basalt displays this structure more frequently and in greater perfection than any other rock. Hence this kind of structure is frequently called *basaltic*. (See *cut*.) the shaft rests in columns of nearly all styles. It appears in most Egyptian forms, but is not present in the Greek Doric column, of which the shaft rests directly on the stylobate. In purely Hellenic examples of the Ionic and Corinthian the base consists of various combinations of moldings on a circular plan, without the awkward square plinth which was universally adopted by the Romans, and was generally retained in the elaborately molded bases of Byzantine and medieval architecture. See cut under column.

4 (a) In *zool* and *bot*, the extremity opposite to the apex; the point of attachment, or the part of an organ which is nearest its point of attachment: as, the base of a leaf, the base of a shell. The point of attachment of an anther, however, is sometimes at the apex (b) In *zool*, also, that part or extremity of anything by which it is attached to another of higher value or significance — 5. In *chem*, a compound substance which unites with an acid to form a salt. The term is applied to the hydroxide of the metals, to certain metallic oxides, and to groups of atoms containing one or more hydroxyl groups (OH) in which hydrogen is replaceable by an acid radical.

6 In *phar*., the principal ingredient of any compound preparation — 7. In *crystal*., same as *basal plane* (which see, under *basal*) — 8. In *petrol*., the amorphous or isotropic portion of the ground-mass of a rock. This may possess a certain amount of structure, rendering it distinct from glass, while not crystalline, when it is known as a *microcrystine base*. If a true glass, it may be, according to the amount of devitrification products present, *microcrystine*, *globulitic*, or *glassy*. In some recent andesitic lavas it possesses a peculiar appearance, so similar to felt that it is known as a *felt like base*. The term *magma* (which see) has also been used by some writers as equivalent to *base*.

9. In *dentistry*, the setting for artificial teeth — 10. In *dyeing*, a substance that has an affinity for both the cloth and the coloring matter, a mordant — 11. In *geom*., the line or surface forming that part of a figure

on which it is supposed to stand; the side opposite to the apex. The base of a hyperbola or a parabola is a line formed by the common intersection of the secant plane and the base of the cone.

13 In *arith* and *algebra*, a number from the different powers of which all numbers are conceived as produced. The base of a system of arithmetical notation is a number the multiples of whose powers are added together to express any number thus, 10 is the base of the decimal system of arithmetic. In the theory of numbers, the base of an index is a number which, being raised to the power represented by the index, gives a number congruent to the number whose index is spoken of. The base of a system of logarithms is the number which, raised to the power indicated by the logarithm, gives the number to which the logarithm belongs. The *Napierian base*, or base of the Napierian system of logarithms, is the number represented by the infinite series,

$$1 + 1 + \frac{1}{2} + \frac{1}{2^2} + \frac{1}{2^3} + \frac{1}{2^4} + \frac{1}{2^5} + \text{etc.}$$

18 An old game, played in various ways, in some of which it is still practised, and in all of which there are certain spaces marked out, beyond or off which any player is liable to be touched with the hand or struck with a ball by a player on the enemy's side. Forms of this game are known under the names of *prisoners' base*, *rounders*, and *base ball*, under which last name it has become the national game of the United States.

base-ball (bās'bāl'), *n* 1 A game of ball played by eighteen persons, nine on a side. A square plot of ground called the diamond, with sides 90 feet long, is marked off, at the corners of which are the bases, known as *home* or *home base* (B), *first base* (1), *second base* (2), and *third base* (3). The players on one side take their positions in the field, the *catcher* (A) just behind the home base, the *pitcher* (C) at a distance of 55 feet from the home base on the line from home to second base, the *throw basemen* near first, second, and third base, the *short stop* (G) between second and third and three *fielders*, known as *right* (H), *center* (I), and *left* (J), at some distance behind and on each side of the second base. The pitcher pitches the ball over the home plate to the catcher. One of the other side which is said to be *in*, or *at the bat*, takes a position by the home base, and tries to strike the ball as it passes him. If he knocks it into the air, and one

of the other side catches it before it reaches the ground, the striker is *out* or *caught out*, that is, retires from the bat, and another takes his place. Should the ball pass outside the line from home to first, or from first to second, or from second to third base, continued indefinitely it is a *foul*, and does not count at all, unless it is caught before it touches the ground, in which case the striker is *out*. Should it strike inside these lines the batter runs to first base, and then or later to second, third, and home base. If he reaches home base he scores a *run*. Should the ball be thrown to and caught by a player standing on first base before the batter succeeds in reaching it, or should the batter be touched with the ball in the hands of any of his adversaries while running from one base to another, he is *out*. One player after another of the side which is *in* goes to the bat until three men have been put out. This constitutes an *inning*. Nine innings for each side make a game, and that side which succeeds in making the greater number of runs wins the game.

2 The ball with which this game is played.

In the process of triangulation, the angles of these triangles and the length of a single side (the base or base line) being known, the lengths of all can be computed. In every great survey a number of base lines are measured, each being from 3 to 10 miles in length.

In sense 5 for *basilisk*, 4, *basil'*] 1 Originally, the stoa in which the king-archon dispensed justice in Athens, hence, in *Gr antiqu*, a frequent distinctive name for a stoa or portico—**2** In Rome, where such buildings were introduced about two centuries before Christ, a portico or hall recalling in plan or use the Athenian royal portico. Many of these halls of justice were appropriated for Christian churches, and new churches were built upon a similar plan, whence *basilica* became a usual name for a church. The typical plan of the basilica is an oblong rectangle, with a broad central nave sep-

arated from two side aisles by rows of columns. Over the apse are galleries. At the extremity of the building furthest from the chief entrance is a raised tribune, where sat originally the Roman praetor or judge, and his assessors, and which naturally became the sanctuary of the Christian church. This tribune usually constitutes an apse of the width of the nave, projecting from the main body of the building and covered with a vault on a semi-circular plan. The Christian high altar, which has replaced the throne of the Roman praetor, stands properly in the center of the chancel of this apse. Variations from the typical plan are of very common occurrence, such as the absence of an architectural apse, the presence of an apse at each end, a favorite arrangement, especially in early German churches of basilican plan, the duplication of the side aisles, the carrying of an aisle around the apse, the presence of a transept between aisles and apse, or of minor apses on each side of the chief apse, and many others often suggested either by accidents of position or by the exigencies of the Christian ritual.

3 Liturgically, in the *Rom Cath Ch*, a title conferred by the pope on a church without reference to its architectural arrangement, and carrying with it certain honors and privileges. In addition to the five major or patriarchal basilicas and the eight minor basilicas at Rome, the title is borne in this sense by other churches in all parts of the world, as the cathedrals of Paris and Rheims in France, and the cathedral of Notre Dame at Quebec.

4 In the middle ages, a name sometimes given to the elaborate structures raised over important tombs, as that over the tomb or shrine of Edward the Confessor in Westminster Abbey so called, according to Ducange, because these structures bore a resemblance to diminutive churches—**5** A large piece of ordnance probably named as *basilisk*, 4.

The breaching artillery consisted of sixty three guns, the smallest of which threw a ball of fifty six pounds, and some few, termed *basilisks*, carried marble bullets of a hundred and twelve pounds weight. Prescott.

Basilisk (ba-sil'iks), *n* *pl* [*E* *pl*, equiv. to *ML* *basilica* see *Basilica*²] Same as *Basilica*².

Basiliidian (bas-i-lid'ia-n), *n* [*< L* *Basiliides*, < *Gr* *Βασίλειδος*, a proper name, in form a patronymic, < *Βασίλειος*, king] A follower of Basiliides, a teacher of Gnostic doctrines at Alexandria, Egypt, in the second century. The Basiliidians disapproved martyrdom, kept their doctrines as secret as possible, were much given to magical practices, and soon declined from the asceticism of their founder into gross immorality. See *Basiliidianism*.

Basiliidianism (bas-i-lid'ia-n-izm), *n* [*< Basiliidian* + *-izm*] The doctrines of Basiliides and the Basiliidians. Basiliides taught that from a universal seed mass containing the germs of all things and created by non-existent Deity (that is, the Absolute) was separated a subtle sonship mounting at once to the Deity, and a coarse sonship attaining a place near to but short of the highest by aid of the Holy Spirit, which acts as the firmament separating supermundane things from mundane. A third sonship, that of the purification, remained in the mass from which also emerged the archons of the ogdoad and hebdomad. See *archon*. The gospel illumination came first to the son of the great archon, who instructed his father. From him it passed to the archon of the hebdomad through his son, and from the hebdomad to Jesus, the son of Mary. The spirit of Jesus ascended at his death to the highest God, leaving his soul in the hebdomad. When the whole of the sonship that remains in this lower world has mounted after Jesus to the highest place, the consummation of all things will come, and an oblivion called the great ignorance will descend on the whole world even upon the two great archons that all may remain in their natural place and not aspire after the unattainable. The gospel is the knowledge of these doctrines, and the spiritual aid to those only who are capable of understanding them. An exceedingly different system, known as *apocryphal Basiliidianism*, was developed among the followers of Basiliides. According to this there are 365 generations of angels occupying 365 heavens, each with its own archon, the lowest being the God of the Jews. Christ was the first born, the Nous or Intellect of the highest God, the unbegotten Father. All his work on earth is mere appearance or outward show, a deotic feature found in many earlier heresies.

basiliscine (bas-i-lis'm), *a* [*< L* *basiliscus*, a basilisk, + *-ine*] Pertaining to a basilisk.

basiliscus (bas-i-lis'kus), *n* [*L*, a basilisk see *basilisk*] 1 A basilisk—**2** [*NL*] In ornith., an old and disused name of the small crested or golden-crowned wren of Europe, *Regulus cristatus*. It is known in many languages by names corresponding to "little king," as *kinglet*, *satelit*, *kinglet*, *regillo*, *regalotus*, *regulus*, etc. also *ser*, *serotin*, *prebump*, *trochilus*, *echillus*, *calendulus*, etc. See *kinglet*.

3 [*cap*] [*NL*] A genus of saurian reptiles, or *Lacertidae*, of the family *Iguanidae* (formerly held to be of greater extent than now), characterized essentially by the presence of a continuous median dorsal crest along the back and tail, erectile at will. There are no femoral pores, and no gular sac, but a dilatable pouch on the head. The dentition is pleurodont. The mitered or hooded basilisk, *B. mitratus*, is especially remarkable for a membranous bag at the back of the head of the size of a small hen's egg, which can be inflated with air at pleasure, and the function of which is analogous to that of the air bladder of fishes. The other species have such hoods also, but of a smaller size. To this organ they owe their name, which

Hooded or Mitered Basilisk (*Basiliscus mitratus*)

recalls the basilisk of fable, though in reality they are harmless and exceedingly lively creatures. The species are inhabitants chiefly of Central America and Mexico, and peculiar to America, although one of the *Acanthidae* of Amblyops has been erroneously referred to the genus.

basilisk (bas'il-isk), *n* and *a* [Also, until recently, as *L*, *basiliscus*, < *ME* *basilisk* (cf. also *basilicok* and *F* *basile*), < *L* *basiliscus*, < *Gr* *βασιλισκος*, a little king, a kinglet (bird), also a kind of serpent, so named from a white spot resembling a crown on the head, dim of *βασιλεως*, a king] **I** *n* 1 A fabulous creature formerly believed to exist, variously regarded as a kind of serpent, lizard, or dragon, and sometimes identified with the cockatrice. It inhabited the deserts of Africa, and its breath and even its look were fatal. In heraldry it is represented as an animal resembling the cockatrice, with its tail terminating in a dragon's head, hence formerly also called *amphipetean cockatrice*, as having two heads. See *amphipetean*.

Like as the Basilisk, of serpents seed,
From powerfull eyes close venom doth convey
Into the lookers hart, and killeth farre away.
Spenser, *F* Q, IV, viii, 80.

There is not one that looketh upon his eyes but he dieth presently. The like property has the *basilisk*. A white spot or star it writeth on the head and setteth it out like a coronet or diadem. If he but hiss no other serpent dare come near. Holland, tr of Pliny, viii, 21.

2 In herpet., a lizard of the old genus *Basiliscus* (which see) in the widest sense—**3** In ornith., the golden-crowned wren or kinglet. See *basiliscus*, 2—**4** A large piece of ordnance so called from its destructive power. It varied greatly in size and style at different times. In the fifteenth century it is spoken of as throwing stone balls of the weight of 200 pounds, and was therefore of prodigious caliber. D'Aubigné in his History speaks of them as carrying stone balls of 300 pounds, but it is not certain which standard he has in view. In the seventeenth century it was a smaller gun, but still one of the largest then in use. See *basilica*, 5.

Awake ye men of Memphis!—hear the clang

Basilosauridae (bas'io-sa'ri-dē), *n* *pl* [*NL*, < *Basilosaurus* + *-idae*] A family of extinct zeuglodont cetaceans, typified by the genus *Basilosaurus* (or *Zeuglodon*), having the parietal, the frontal, and especially the nasal bones elongated, and the anterior nares opening forward. [According to the rules of zoological nomenclature, the operation of the law of priority requires retention of the name, though the creatures were not saurians.]

Basilosaurus (bas'io-sa'rus), *n* [*NL*, < *Gr* *βασιλειος*, king, + *σαῦρος*, lizard] A genus of large fossil cetaceans from the Eocene of the southern United States. The name was given under the erroneous impression that the creatures were reptiles, and was afterward changed to *Zeuglodon*. Also called *Polyptichodon* and *Hydroarchus*. See *Zeuglodontia*.

Gael *bac*, a hollow, a hook, crook, = *W. bach*, a hook, = Bret. *bak*, *bag*, a shallow boat see *bac*³. Hence *basinet*. 1. A circular dish or vessel of greater width than depth, contracting toward the bottom, and used chiefly to hold water or other liquid, especially for washing, but also for various other purposes.

Let one attend him with a silver basin,
kull of roses water, and bestrew'd with flowers,
And say, Will't please your lordship cool your hands?
Shak., I. of the S. Ind., 1

2. As much as a basin will hold, a basinful — 3. In the arts and manufactures: (a) In *hat-making*, a vessel filled with boiling water in which the loose mat of felted fur formed on the cone for a hat-body is dipped in the process of basining (see *basin*, v. t.), in order to shrink it to the proper size. Also called *sizing-kettle*. (b) A concave piece of metal on which glass-grinders form their convex glasses. (c) The scale or scale-dish of a balance when concave — 4. When of silver, such vessels usually had a brass or latten basin within to catch the wax-droppings — 6. The hollow part of a plate or dish.

8. In *geog.*: (a) The area drained by a river. The term is ordinarily used only when speaking of a large river, and then includes the entire area drained by the main stream and its tributaries. The line separating two river systems from each other is the watershed. A *closed basin* is an area which has no outlet to the sea. In the United States, the *Great Basin* is that portion of the Cordilleran region which has no such outlet, comprising an area of about 225,000 square miles. (b) A basin-shaped depression or hollow, a circular or oval valley — 9. In *geol.*, an area over which the stratified formations are so disposed as to show that they were deposited in succession within a basin-shaped depression of the original surface, thus giving rise to a series of beds which have a general dip toward a common center, especially near the edges of the area. In some instances the basin structure is very marked, as in the case of the Forest of Dean and Indre coal fields. Sometimes, however, a mere synclinal depression of the strata is called a basin, and this is especially the case in the Appalachian coal field, where any smaller area, separated by erosion from the main body of the coal-bearing strata, may be called a basin. The geological basins of London and Paris are especially known and interesting. The rocks of both are chiefly Lower Tertiary, or Eocene and Oligocene, the name sometimes given to that part of the series which is intermediate in age between Eocene and Miocene. The important member of the London basin — the "London clay" — is absent from the Paris basin. The Middle Locene is represented in the Paris basin by an extremely fossiliferous rock, the *Calcaire grossier* (which see). The Tertiary of the Paris basin, like that of the London basin, rests on a thick mass of white chalk. This has been completely bored through at various points, for the purpose of obtaining water, which rises above the surface in large quantities at the wells of Grenelle and Passy, and at other points.

10. In *anat.*: (a) The third ventricle of the brain. (b) Cf. *F. bassin* in same sense. The pelvis — 11. The basin of the antenna is a concavity in which the antenna is inserted, often limited on the inner side by a carina, as in the ants.

ly of very simple form, named from its resemblance to a little basin. It was ordinarily worn alone, but in battle the heavy helmet or heaume was placed over it, resting upon the armor of the neck and shoulders. When the heaume came to be abandoned on account of its great weight, the basinet was furnished with a visor. It was the commonest form of headpiece during the thirteenth and fourteenth centuries, and so continued until the introduction of the armor. See *helmet*, *mor*, *aventail*, *casual*, and *armor*.

I *n* 1 A natural child, a child begotten and born out of wedlock, an illegitimate or spurious child. By the civil and canon laws (a rule adopted also in many of the United States) a bastard becomes a legitimate child by the marriage of the parents at any future time. But by the laws of England a child to be legitimate must at least be born after the lawful marriage. It does not require that the child shall be begotten in wedlock, but it is indispensable that it should be born after marriage, no matter how short the time the law presuming it to be the child of the husband. The only legal incapacity of a bastard is that he cannot be heir or next of kin to any one save his own issue. Inheritance from the mother is allowed in some jurisdictions. In England the maintenance of a bastard in the first instance devolves on the mother, while in Scotland it is a joint burden upon both parents. The mother is entitled to the custody of the child in preference to the father. In the United States the father may be compelled to provide support. — 2 In *sugar-refining* (a) A large mold into which sugar is drained. The G name is *fledermaus*, cf *E fliethermouse*.] A wing-handed, wing-footed flying mammal, of the order *Chiroptera* (which see). The species are upwards of 450 in number, mostly cosmopolitan, but largest most varied in character and most abundant in individuals in tropical and subtropical countries. The species of temperate countries are of the United States and Europe, are comparatively few small and of such uniform characters that they give little idea of the extent and diversity of the order in warmer regions. Bats are the most aerial or volant of all animals even more so than birds or insects, for they have scarcely any other means of locomotion than flying. They are

nocturnal and crepuscular, passing most of the daytime in dusky retreats, where they gather sometimes in almost incredible multitudes, and generally repose hanging head downward by their hind feet. In size they range from less than the size of a mouse to large forms with some five feet spread of wing. The body is usually softly furry, the wings are membranous and naked. The great majority

Hoary Bat (*Lasiurus pruniceus*)

are insectivorous and carnivorous and constitute the suborder *Animaliura* or *Insectiura*, of these a few prey upon other bats, and some, of the genus *Desmodus* and *Diphylla* suck the blood of large animals, but the great bats of South America called *vampires* are chiefly frugivorous. See *Desmodus*, *Lasiurus*. The old world fruit bats flying foxes, or toucans are mostly large species, constituting the family *Pteropodidae* and suborder *Frugivora*. See *cut under flying fox*. The physiognomy of many of the bats is grotesque owing to the extraordinary appendages of the snout, especially in the families *Rhinolophidae* and *Phyllostomatidae* or horseshoe bats and leaf-nosed bats. The ears too are often of great size and much complexity of detail, and, like the various appendages of the face, and the wing, membranous structures, serve as tactile organs of extreme delicacy even to the extent of being objects without actual contact. The wings of bats are commonly given to representations of evil genii and demons, as those of birds are attached to good angels. The bat is represented on Egyptian monuments as one of the fruit bats, the *Chiroptera capitata*. The Hebrew name of the bat of the Old Testament, *atalaph*, is now used in the form *Atalapha* for a genus of American bats. The commonest species of the United States are the small brown bat, *L. septentrionalis* and the red bat, *Lasiurus noctivagus*. Among European species may be noted the screech (*L. septentrionalis*), the pipistrelle (*L. pipistrellus*), the barbastelle (*Barbastella communis*), the owl bat (*Photis auritus*), and the horseshoe bats (*Rhinolophus hipposideros* and *R. ferrugineus*). In heraldry the bat is always represented displayed, that is with the wings opened, and is often called by its older name *serotinus*.—*Bat's wing*, in *anat* see *ala vesperitima*, under *ala*.—*Bat's-wing burner*. That of the knights grand crosses (fig. 2) is of silver, with eight points of rays wavy, on which is a gold cross bearing three crowns, encircled by a ribbon displaying the motto of the order, while beneath is a scroll inscribed *Ieh d'ieu* (I serve) the motto of the Prince of Wales. The star of the knights commanders differs chiefly in lacking the wavy rays. **Medicated bath**, a bath of liquid or vapor designed to produce a curative effect by virtue of some medicine mixed in it. **Mercurial bath**, a bath used in the pneumatic trough to collect such gases as are readily absorbed by water. **Metal-bath**, a bath used in chemical operations requiring a higher temperature than can be produced by means of a water bath. Mercury fusible metal tin, and lead are employed for such baths. **Russian bath**, a kind of bath employed in Russia and introduced thence in other countries. It resembles in principle the ancient and the Turkish baths but differs from the latter in that the subject, after exposure to the influence of very hot vapor, with the attendant kneading, lathering, etc., is suddenly and violently cooled by means of a jet of ice-cold water. It is said to be of service in alleviating rheumatism. **Sour bath**, in *tanning*, in acid liquid made of bran and rye malt. It is employed to remove the lime used in a previous process and also to soften the skin to render it more absorbent of the tanning materials. **Tin-bath**, molten tin covered with melted tallow to prevent the oxidation of the metal. It is used in giving a coating of tin to other metals as sheet iron, to form the so-called tin plate. **Turkish bath**, a kind of bath introduced from the East. In such the subject after having undergone copious perspiration in a heated room, is subjected to various processes, as soaping, washing, kneading, (shampooing) etc., and ultimately proceeds to an outer apartment where he is placed on a couch to cool. Turkish baths or modillions of them are provided in all hydrotherapeutic establishments and are to be found in most towns of considerable size. **White bath**, a bath used in dyeing, an emulsion formed by Gallic oil and the carbonates of alkalis.

Volta's pile battery

elect., a voltage cell, or more properly a number of voltaic cells (see *cell*) arranged together so as to give a powerful current of electricity

The way in which the cells are coupled depends upon the nature of the current which is desired and the relation between the external and internal resistance (See *resistance*) For example if the cells are arranged in series the copper of the first with the zinc of the next, and so on the result is to give the maximum electromotive force, on the other hand, if arranged abreast, all the zincs being connected together and all the copper plates together the electromotive force is the same as for a single cell, but the internal or *battery* resistance is diminished and hence the strength of the current or the quantity of electricity may, under certain conditions, be much increased. The first method is sometimes spoken of in popular language as the arrangement for *intensity*, the second for *quantity*. An early form of battery was *Volta's pile*, and another his *crown des tasses*, or "crown of cups". The different kinds of battery are named according to the materials or the form of the cells of which they are composed, or the way in which the cells are arranged. Some of the commoner kinds are the *Danell*, *Grove*, *Bunsen*, *Le Clanché*, *gravity*, *bichromate*, etc. For a description of these and others see *cell*

Such batteries are constructed without parapet without embankment an interior slope not required, but retaining the natural slope of the soil, and platforms horizontal instead of inclining slightly toward the front as in gun batteries. See *cell* on next page **Mountain battery**, a battery of light guns, so fitted that the pieces and then carriages may be transported upon the backs of mules or pack horses **Oblique battery**, a battery whose line of fire makes an angle of 20° or more with the

Storage or Secondary Cell or Accumulator. Daniell form. C, C' lead plates rolled in spiral and separated by pieces of rubber. C, C' wires from the primary charging battery. A, A' poles of secondary cell.

with red oxide of lead — the primary current with which the cell is charged (by the wires G and H) serves to peroxidize and reduce this coating, respectively, on the sheets connected with the two poles — the chemical energy thus stored up is given back in the form of a continuous and regular electric current when the poles of the charged cell (A, A') are connected and the chemical action is reversed — **Sunken battery**, a battery in which the sole of the embrasure is on a level with the ground and the platform is consequently sunk below it — (*Talbot*) The parapet is formed from the earth excavated from the site constituting the platform — **Half-sunken battery**, a battery of which the parapet is formed partly from earth taken from the inside or terreplein and partly from a ditch outside — **Urticating batteries**, in *zool.* the nematocysts or thread cells of hydroid polyps — **Water-battery**, an electric battery in which the liquid employed is water — It is useless as a source of a current because of the high resistance of the water but by having a large number of zinc-copper couples a high and constant difference of potential is obtained at the two poles — it is thus valuable in many electrostatic experiments.

Of bristly pikes, that ever threaten his foes

Shak., *Venus* and *Adonis*, I, 619

Battle-range, the range best suited to firing on an enemy's line of battle — Upon the rear sights of the latest military rifles the elevation corresponding to that range is designated by stamping the letter "B" opposite the battle range elevation — This range is 262 yards, corresponding to a continuous dangerous space of 337 yards, for the Springfield rifle, caliber 45, used against foot-troops — **Battle-royal**, (a) A battle with fists or cudgels, in which more than two combatants are engaged, a free fight — (b) A fight of game cocks, in which more than two are engaged — **Drawn battle**, a battle in which neither party gains the victory — **Order of battle** See *order* — **Pitched battle**, a battle in which the armies are previously drawn up in form, with a regular disposition of the forces — **To give battle**, to attack an enemy — **To join battle**, properly, to meet the attack, commonly, to begin a battle — **Trial by battle** Same as *wager of battle* — **Wager of battle** or *battel*, in *law*, a species of trial for the decision of controversies used among the rude military peoples of Europe — It was introduced into England by William the Conqueror, and practiced in three cases only — In the court martial, or court of chivalry or honor, in appeals of felony, and in issues joined upon a writ of right — The contest was held before the judges on a piece of ground inclosed, and the combatants were bound to fight till the stars appeared, unless the death or defeat of one party sooner decided the contest — The weapons used were batons or staves an ell long — Women, priests, men above sixty, and lame and blind persons might appear by champions — Though long fallen into desuetude, it was a valid and legal mode of trial in England down to 1818, and was then formally abolished in consequence of the demand by the defendant in a suit for this mode of arbitrament, and of the fact that this demand could not legally be denied him — **Syn** 1 *Battle*, *Engagement*, *Conflict*, *Fight*, *Combat*, *Contest*, *Action* — *Battle* is a general term, and the most common — It is the appropriate word for great engagements as, the *battle* of Waterloo — *A battle* may last merely a few hours or for days as, the *battle* of Gettysburg lasted three days — *Engagement* is in technical military usage practically equivalent to *battle*, but it is a less forcible word — *Conflict*, literally, a clashing together, is a strong word, implying fierce physical encounter — *Fight* has the energy of a monosyllable, it denotes actual conflict — A man may take part in a battle without actually fighting — *A battle* may include many fights as, the *fight* at the flag staff in the battle of the Alma — or it may itself be described as a *fight* — *Combat*, like *conflict*, is a word of more dignity than *fight*, it is by its history suggestive of a struggle between two, as persons, animals, squadrons, armies — *Content* is a very general word, of uncertain strength but often joined with a strong adjective as, a stubborn *content* — An *action* is a minor or incidental act of war, a single act of fighting as, the whole *action* lasted but an hour — All these words apply equally to operations by land or by sea — See *encounter* and *strife*

battle-ship (bat'l-ship), *n* A ship of war, specifically, a powerful war-ship designed to fight in the line of battle, in recent use, a heavily armored and armed sea-going war-ship intended for the line of battle. The change from the wooden war ship propelled by sail power to the modern armored iron and steel steam battle ship dates from about the middle of the nineteenth century. The first war ship propelled by a screw was the United States ship *Pinckney*, and the first ironclad (with the exception of a number of floating batteries built by the French for use in the Crimean war, and copied by the English) the French armored wooden frigate *La Gloire*, launched in 1860. This was followed by the English *Warrior*, launched in 1861. From this date the development of the war-ship largely influenced by the success of the *Monitor* (which see), has been very rapid, resulting in a great diversity of types (as regards arrangement and weight of protective armor, character of armament and adaptation of design to special ends), and accompanied by an equally rapid progress in the perfection of ordnance (see *ordnance*, *gun*), armor plate (which see), and explosives. The *Warrior*, an iron vessel was of 9,210 tons displacement, had 42 inch iron armor, carried 32 muzzle loading guns, of which the largest were of 8 inch caliber and of small power, and had no torpedo-jectors, the *Capanto*, of the Italian navy, launched in 1883, one of the largest war ships yet constructed, is of 15,000 tons displacement, has steel armor 19 inches in maximum thickness, carries 16 guns, of which 14 are of 17 inch caliber, and has 4 torpedo-jectors. Modern war vessels are classified, according to the service for which they are specially designed, as battle ships, coast defense and harbor defense ships, cruisers (which are classed as armored, protected, or unarmored), according to the degree of defensive power, lookouts, torpedo boats, dispatch vessels, mines, torpedo boats, torpedo boat destroyers, etc. Of vessels of these classes the United States possessed at the beginning of 1899 forty battle ships, with five more in process of construction (two, the *Keats* and *Kentucky*, were launched March 24, 1898), nine coast defense and harbor defense vessels (including a number of obsolete monitors), one steam-dynamite cruiser, three armored cruisers (one of which, the *Texas*, has 12 inch armor and is also rated as a second class battle ship), fifteen protected cruisers, four unprotected cruisers, a number of gunboats and dispatch vessels, two torpedo craft, with thirteen in process of construction, and various transports, etc. Of the battle ships the *Oregon*, *Massachusetts*, and *Indiana*, launched in 1893, are of 10,288 tons displacement, have

nickel steel armor 18 inches in maximum thickness, carry four 13 inch, eight 8 inch, four 6 inch, and twenty six quick fire guns, have torpedo-jectors, and are capable of a (nominal) speed of 16 knots. The *Iowa*, launched in 1896 is of 11,110 tons displacement, has 15-inch armor, and carries four 12 inch guns in place of the 13 inch guns of the other vessels. The *Kearsarge* and *Kentucky* are of 11,525 tons displacement, have 17-inch armor, and carry four 13 inch four 8 inch, four 6 inch, and twenty six quick fire guns. The *Alabama*, *Illinois*, and *Wisconsin* are to have the same displacement and armor. Of the armored cruisers, the *Texas*, launched in 1892, is of 6,315 tons displacement, carries 13 inch armor and has two 12-inch, six 6 inch and eight 4 inch quick fire guns. The *New York*, launched in 1891 is of 8,000 tons displacement, is protected with 10 inch armor, and has six 8 inch and twenty four quick fire guns. The coast defense vessels are of the monitor type, and several of them are heavily armored and powerful vessels, mounting 10 inch and 12 inch guns. The effective vessels of the British navy comprise 68 battle ships, 14 coast defense ships, 9 armored cruisers, 80 cruisers of inferior classes, 19 look-out ships, 34 torpedo gunboats and 171 torpedo craft of all classes. A large number of vessels also are in process of construction. The effective French navy includes 37 battle ships, 16 coast defense ships, 11 first class cruisers, 16 second and third class cruisers, 12 look-out ships, 13 torpedo gunboats, and 242 torpedo craft of all classes. Of the other European navies the most powerful are those of Russia, Italy, and Germany. The Spanish navy includes 1 battle ship, 1 coast defense ship, 9 armored cruisers, 1 protected cruiser, 18 second and third class cruisers, 80 gunboats, dispatch vessels, etc., and 27 torpedo craft of all classes.

Usually, *be* is a mere copula, or sign of predication, a link between a subject and a predicate. As such it asserts, or expresses as fact the inclusion of the subject among the things denoted by the predicate, or the possession by the subject of the characters signified by the predicate and this it does with temporal and modal modifications, while the whole substance of the predication, or all that is predicated, is expressed separately, in noun or adjective form, or the equivalent of such thus, I am good, he was a hero, they will be there, we should have been beloved. Hence, every other predicating word or verb may be analyzed into a form of *be*, expressing the predication, and an adjective or noun expressing what is predicated thus, he loves into he is loving or he is a lover, and so on. Such a copula is possessed by many languages, being, as in English, reduced to that value by gradual attenuation of an originally substantial meaning, as in modern French, *était*, 'was', from Latin *etabāt*, or nearly as *metaph* 'stand forth'.

4. In *metaph*, to subsist in a state not necessarily amounting to actual existence, have the rudiments of existence. See *being* — 5. An auxiliary verb denoting subsistence in or subjection to the mode of action or being expressed by the principal verb. (a) Joined with a present participle, it has the grammatical construction of a predicate adjective qualifying the subject, to make a continuous or progressive or imperfect present thus, I am loving, etc., beside I love, etc. — to match which the language has rather recently acquired a corresponding passive, I am being loved, beside I am loved. (b) It is joined with a past participle (having the same construction as above), to make phrases equivalent with the passive verb forms or verb phrases of other languages thus, he is loved, Latin *amatur*, German *er wird geliebt*

Hence such phrases are ordinarily viewed as making a passive conjugation of the English verb. They are distinguished in form from mere combinations of *be* with a predicate participle thus, he is beaten is passive when it means 'somebody is beating him', but not when it means 'he is a beaten man', or 'somebody has beaten him'. (c) Formerly, as still to a very limited extent (much more in other related languages, as German and French), *be* was the auxiliary used in making the past tenses of intransitive verbs, as *have* of transitives thus, he is come, they were gone (German *er ist gekommen*, French *ils étaient allés*), and so on. At present, *have* has come to be the auxiliary almost universally used in this sense.

The heathen are perished out of his land [that is, have perished and now no longer exist in the land] Ps. x 16.

(d) An infinitive with *to* after *be* forms a sort of future, often with a certain implication of obligation thus, he is to come, they were to appear, she would have been to blame or to be blamed [Be, with *to*, in perfect tenses (have been, had been, etc.), is used in the sense of *go*, yet hardly except in colloquial style thus, he has been to Paris, we had been to see her] — *Been* and, a common vulgarism introduced pleonastically into the perfect and pluperfect tenses of other verbs sometimes extended to *been* and *gone* and

It means primarily 'about,' 'around,' as in *beast*, *beard*, whence the more general sense 'around,' 'all over,' leading to a merely intensive use, as in *beumar*, *beepatter*, *beprinkle*, etc. It is also used to form transitive verbs from nouns, as *begin*, *bedew*, *befog*, *benure*, etc., or from intransitive verbs, as *belie*, *behold*, *behave*, etc., verbs of either class often conveying slight contempt, as *bepraise*, *beplunder*, *bepride*, etc., and are hence often made for the nonce. In a few verbs, all obsolete except *behead*, *be* assumed a privative force, while in many verbs this prefix, through loss of the simple verb, or a deflection of its sense, or by mere dilution, has now no assignable force, as in *begin*, *bequeath*, *become*, *behold*, etc.

Beads are numbered according to their specific gravities, and the strength of the spirit is denominated by the number of that one which remains suspended in it, and neither sinks to the bottom nor floats on the surface. Among joiners the bead is variously introduced as (a) *bead and butt* (fig. 1), framed work in which the panel is flush with the framing and has a bead run on two edges in the direction of the grain only, while the ends are left plain; (b) *bead and flush* (fig. 2), framed work in which a bead is run on the edge of the framing; (c) *bead and quirk* (fig. 3) the edge of a piece of stuff on which a bead is formed or stuck as it is called, flush with the surface; (d) *bead and double quirk*, or *return bead* (fig. 4), the angle of a piece of stuff on which a bead is stuck and quirked or relieved on both surfaces; (e) *bead, butt, and square work*, a panel which has beads on two of its edges on one side only, while the other side is plain; (f) *bead, flush, and square*, framing which is beaded on one side only.

The bean known to the ancients from prehistoric times was the *Vicia Faba* (or *Faba vulgaris*), a native of western Asia, and the same as the field horse, or tick bean, and the broad or Windsor bean, still largely cultivated in the fields and gardens of the old world. It is used when green as a table vegetable, and when dry as feed for horses and sheep. Grizzly Bear (*Ursus horribilis*)

of the same word. Perhaps ult. = *L. ferus*, wild, fera, a wild beast. see fierce] 1. A large plantigrade carnivorous or omnivorous mammal, of the family *Ursidae*, especially of the genus *Ursus*. The teeth of the true bears are 42, and none of the molars are sectorial. The animals are less truly carnivorous than most of the order to which they belong, feeding largely upon roots, fruits, etc., as well as honey and insects. The tail is rudimentary, and the muzzle is prominent, with mobile lips and a slender, sometimes very extensible, tongue. The best known species is the brown or black bear of Europe and Asia, *Ursus arctos*, found chiefly in northerly regions, of which several varieties are described, differing much in size and color, and to some extent in shape. It is ordinarily about 4 feet long and 2½ feet high, its flesh is eaten, its pelt is used for robes, and its fat is in great demand as an ingredient known as bear's grease. The grizzly bear of North America, *U. horribilis*, is as regards specific classification hardly separable from the last, and like it runs into several varieties, as the cinnamon bear, etc. It is ordinarily larger than the European, and is noted for its ferocity and tenacity of life. It inhabits the mountainous portions of western North America. The common black bear of North America is a smaller and distinct species, *U. americanus*, usually black with a tawny snout, but it also runs into a cinnamon variety. See cut under *Ursus*. The polar bear or white bear, *Ursus* or *Thalassarctos maritimus*, is very distinct,

The Syrian bear, *U. syriacus*, and the Himalayan bear, *U. himalayensis*, respectively inhabit the regions whence they take their names. The spotted bear, *Ursus* or *Tramarcus ornatus*, is the sole representative of the *Ursidae* in South America, so called from the light colored rings around the eyes, which have exactly the appearance of a pair of spectacles, the rest of the face and body being black. The Malayan bear or broung, *U. malayanus*, is a small, black, close haired species with a white mark on the throat, with protrusible lips and slender tongue, capable of being taught a variety of amusing tricks in confinement. The sloth bear or assail of India is distinct from the other bears, and is usually placed in a different genus, *Melursus labiatus*. See *Ursidae*, and cut under *arnaut*.

Syn. *Beautiful*, *Beauteous*, *Handsome*, *Pretty*, *Fair*, *Lovely*, *Comely*, charming, all apply to that which is highly pleasing, especially to the eye. *Beautiful*, the most general of these words, is also often the noblest and most spiritual, expressing that which gives the highest satisfaction to eye, ear, mind, or soul. *Beauteous* is chiefly poetic, and covers the less spiritual part of *beautiful*. *Handsome* is founded upon the notion of proportion, symmetry, as the result of cultivation or work, a *handsome* figure is strictly one that has been developed by attention to physical laws into the right proportions. It is less spiritual than *beautiful*, a *handsome* face is not necessarily a *beautiful* face. *Handsome* applies to larger or more important things than *pretty*, as, a *handsome* house, a *pretty* cottage. It is opposed to *homely*. *Pretty* applies to that which has symmetry and delicacy, a diminutive beauty, without the higher qualities of graceful mass, dignity, feeling, purpose, etc. A thing not small of its kind may be called *pretty* if it is of little dignity or consequence, as, a *pretty* dress or shade of color, but *pretty* is not used of man or their belongings, except in contempt. *Fair* starts from the notion of a brightness that catches the eye. It notes that sort of beauty which delights the eye by complexion and feature, in this sense it is now less common in prose. *Lovely* is a strong word for that which is immediately pleasing to the eye, it applies primarily to that which excites admiration and love. *Comely* applies rather to the human figure, chiefly in its proportions. It is used less commonly than *handsome* to express the result of care or training. See *elegant*.

A rodent quadruped, about two feet in length, of the family *Castorida* and genus *Castor*, *C. fiber*, at one time common in the northern regions of both hemispheres, now found in considerable numbers only in North America, but occurring solitary in central Europe and Asia. It has short ears, a blunt nose, small fore feet, large webbed hind feet with a flat ovate tail covered with scales on its upper surface. It is valued for its fur (which used to be largely employed in the manufacture of hats, but for which silk is now for the most part substituted) and for an odoriferous secretion named *castor* or *castoreum* (which see).

its food consists of the bark of trees, leaves, roots, and berries. The favorite haunts of the beavers are rivers and lakes which are bordered by forests. When they find a stream not sufficiently deep for their purpose, they throw across it a dam constructed with great ingenuity of wood, stones and mud, gnawing down small trees for the purpose and compacting the mud by blows of their powerful tails. In winter they live in houses, which are from 3 to 4 feet high, are built on the water's edge with subaqueous entrances, and afford them protection from wolves and other wild animals. They formerly abounded throughout northern America, but are now found only in unsettled or thinly populated regions. Several slightly different varieties of the European beaver have received special names. The North American beaver is somewhat larger than the European, and exhibits some slight cranial peculiarities.

Beaver (*Castor fiber*)

It is commonly rated as a distinct species or subspecies, under the name of *Castor canadensis*. The so-called fossil beaver, *Castoroides ohioensis*, belongs to a different family, *Castoridae* (which see). See also *Castoridea*.

Origin uncertain, some assume a loss of *r* from orig **biro*, < AS *birowan*, etc, brew see *brew*]. 1. An alcoholic liquor made from any farinaceous grain, but generally from barley, which is first malted and ground, and its fermentable substance extracted by hot water. To this extract or infusion hops or some other vegetable product of an agreeable bitterness is added, and it is then boiled for some time both to concentrate it and to extract the useful matters from the hops. The liquor is then suffered to ferment in vats, the time allowed for fermentation depending upon the quality and kind of beer, and after it has become clear it is stored away or sent to the market. The beers of England and France, and for the most part those of Germany, become gradually sour by exposure to air. *Ale* and *beer* were formerly synonymous terms, *ale* being the earlier in use. At present, *beer* is the common name for all malt liquors, and *ale* is used specifically for a carefully made beer of a certain strength and rather light than dark thus, small beer, ginger beer, and the like are not *ale*, nor are stout and porter. See also *Beghard*. The origin of the name was not generally known, and the forms varied, leading to many etymological conjectures. 2 [Only *Beguin*] A member of a community of men founded on the same general principle of life as that of the *Beguines* (see 1). They became infected with various heresies especially with systems of illumination, which were afterward propagated among the communities of women. They were condemned by Pope John XXII in the early part of the fourteenth century. The faithful *Beguins* joined themselves in numbers with the different orders of friars. The sect, generally obnoxious and the object of severe measures, had greatly diminished by the following century but continued to exist till about the middle of the sixteenth, also called *Beghard* [These names have been frequently used as common nouns, without capitals.]

A *beguine* usually consists of a large walled enclosure, containing a number of small detached houses, each inhabited by one or two *Beguines*; there are also some common houses, especially for the novices and younger members of the community. In the center is the church, where certain religious offices are performed in common. Each *Beguine* keeps possession of her own property, and may support herself from it, or from the work of her hands, or by serving others in their houses. They are free to leave at any time, and take only simple vows of chastity and obedience during residence. Pious women may also, under certain restrictions, rent houses and live inside the enclosure without formally joining the community. Such establishments are now chiefly met with in Belgium, the immense one near Ghent, built by the Duke of Aremberg in 1874, is the finest example, and one of the most recent.

Syn. 1 Carriage, Behavior, Conduct, Deportment, Demeanor, bearing, manner, manners, all denote primarily outward manner or conduct, but naturally are freely extended to internal states or activities. Carriage, the way of carrying one's self may be mere physical attitude, or it may be personal manners, as expressing states of mind we speak of a haughty or noble carriage, but not ordinarily of an ignoble, cringing, or base carriage. Behavior is the most general expression of one's mode of acting, it also refers particularly to comparatively conspicuous actions and conduct. Conduct is more applicable to actions viewed as connected into a course of life, especially to actions considered with reference to morality. Deportment is especially behavior in the line of the proprieties or duties of life as, Mr Turveydrop was a model of *deportment*, the scholars rank depends partly upon their *deportment*. Demeanor is most used for manners as expressing character, it is a more delicate word than the others, and is generally used in a good sense. We may speak of lofty or gracious carriage, good, bad, wise, foolish, modest, conceited *behavior*, exemplary *conduct*, grand, modest, correct *deportment*, quiet, refined *demeanor*

To say that men stood one after another in a line was once correct (see *Chaucer, Knight's Tale, l 901*, "knecht ech after other"), but is not so now. They may come one after another, that is somewhat irregularly and apart, they came one behind another that is close together, one covering another. The distinction is similar to that between *beneath* and *below*

being (bē'ing), *n* [*< ME beyng*, *byng*, verbal *n* of *bein*, *be*] 1 Existence in its most comprehensive sense, as opposed to non-existence; existence, whether real or only in thought — 2 In *metaph*, subsistence in a state not necessarily amounting to actual existence, rudimentary existence. But the word is used in different senses by different philosophers. Hegel defines it as immediacy, that is, the abstract character of the present. In its most proper acceptance, it is the name given by philosophical reflection to that which is revealed in immediate consciousness independently of the distinction of subject and object. It may also be defined, but with less precision, as the abstract noun corresponding to the concrete class embracing every object. *Being* is also used in philosophy influenced by Aristotle to signify the rudiment or germ of existence, consisting in a nature, or principle of growth, before actual existence. It is also frequently used to mean actual existence, the complete preparation to produce effects on the senses and on other objects. Psychologically *being* may be defined as the objectification of consciousness, though the distinction of subject from object logically presupposes being

2. A conviction of the truth of a given proposition or an alleged fact, resting upon grounds insufficient to constitute positive knowledge. Knowledge is a state of mind which necessarily implies a corresponding state of things, *belief* is a state of mind merely, and does not necessarily involve a corresponding state of things. But *belief* is sometimes used to include the absolute conviction or certainty which accompanies knowledge

Neither do I labor for a greater esteem than may in some little measure draw a *belief* from you, to do yourself good, and not to grace me

Shak, As you Like It, v 2

He [James Mill] uses the word *belief* as the most general term for every species of conviction or assurance, the assurance of what is before our eyes, as well as of that which we only remember or expect, of what we know by direct perception, as well as of what we accept on the evidence of testimony or of reasoning

J S Mill

By a singular freak of language we use the word *belief* to designate both the least persistent and the most persistent coherence among our states of consciousness,—to describe our state of mind with reference both to those propositions of the truth of which we are least certain, and to those of the truth of which we are most certain

J Fiske, Cosmic Philos, i 61

3. Persuasion of the truth of a proposition, but with the consciousness that the positive evidence for it is insufficient or wanting, especially, assurance of the truth of what rests chiefly or solely upon authority. (a) In this sense, the word sometimes implies that the proposition is admitted as only probable. (b) It sometimes implies that the proposition is admitted as so reasonable that it needs no proof. (c) Sometimes used for religious faith

Knowledge and *belief* differ not only in degree but in kind. Knowledge is a certainty founded upon insight, *belief* is a certainty founded upon feeling. The one is perspicuous and objective, the other is obscure and subjective

Perhaps connected with *bell*², *v.*, *roul*] 1. A hollow metallic instrument which gives forth a ringing sound, generally of a musical quality, when struck with a clapper, hammer, or other appliance. Its usual shape resembles that of an inverted cup with a flaring rim. If the bell is stationary, it is often made saucer shaped, and in this case is commonly termed *clanging*. Bells of this form are generally used as call bells or signal bells. Bells are made for many purposes and in a great variety of forms and sizes. They usually consist of an alloy of copper and tin, called *bell metal* (which see). Church bells are known to have been in use in Italy about A. D. 400 and in France in the sixth century. The earliest bells were often four sided, made of thin plates of iron riveted together. The manufacture of the largest and finest bells has been developed since the fifteenth century. The largest ever made is the great bell of Moscow, called the *Zar Kolokol*, cast in 1733, and computed to weigh about 110,000 pounds. It is about 19 feet in diameter and the same in height. It is supposed never to have been rung, and is now used as a chapel, having been raised in 1836 after lying half buried since 1797, when a piece was broken out of its side in a fire. The largest bell in actual use weighs 128 tons and is also in Moscow. The bell of the Buddhist monastery Ch'ien, in Kioto, Japan, was cast in 1631 and weighs 125,000 catties, or over 74 tons of 2,240 pounds each. Among the great

French bells, the *bourdon* of Notre Dame, Paris, weighs about 17 tons, the largest bell of Sens cathedral 16 tons, and that of Amiens cathedral 11 tons. In England, the "Big Ben" of Westminster weighs over 14 tons, but is cracked, the "Great Peter" at York 10 tons, and the "Great Tom" at Oxford, 7 tons. The new "Kaiser glock" of Cologne cathedral weighs 26 tons. For church bells made to be rung in unison, see *chime*. In heraldry, the bells generally represented are hawk bells in shape like a small sleigh bell, a hawk represented with those bells attached is said to be *belled*. When a bell of ordinary form is used as a bearing, it is called *church bell* for distinction.

But what art thou that seyst this tale,

(d) The strobile, cone, or catkin containing the seed of the throat. (e) The pendulous dermal appendage under the hoop of the male moose. (f) In hydroid polyps, the umbrella or gelatinous disk.

3 *pl.* A number of small bells in the form of hawks' bells or sleigh-bells, fastened to a handle and constituting a toy for amusing an infant.—4. *pl. Naut.*, the term employed on ship-board, as *o'clock* is on shore, to denote the divisions of daily time, from their being marked by bells, which are struck every half-hour. The day, beginning at midnight, is divided into watches of four hours each, except the watch from 4 to 8 P. M., which is subdivided into two dog watches. A full watch thus consists of eight half hours, and its progress is noted by the number of strokes on the bell. For instance, 1 o'clock P. M. is equivalent to two bells in the afternoon watch, 3 o'clock, to six bells, 4 o'clock, to eight bells, etc.—*Angelus bell*, *Gabriel bell*, *Lady bell*, a church bell rung to remind those within hearing to recite the angelus. See *angelus*.—*Ave bell*, *Ave Maria bell*, or *Ave Mary bell*. Same as *angelus bell*.

I could never hear the *Ave Mary bell* without an elevation, or think it a sufficient warrant because they erred in one circumstance for me to err in all—that is, in silence and dumb contempt.

Sir T. Browne, *Religio Medici*, I, 3.

Bell, book, and candle, a phrase popularly used in connection with a mode of solemn excommunication formerly practised in the Roman Catholic Church. After the formula had been read and the book closed, the assistants take the lighted candles they hold in their hands to the ground so as to extinguish them, and the bells were rung together without order, the last two ceremonies symbolized the disorder and going out of grace in the souls of the persons excommunicated.—**Blessed or hallowed bell**, in the *Rom. Cath. Ch.*, a bell which has received the solemn blessing of the church, in which the bishop prays that its sound may avail to summon the faithful, to excite their devotion, to drive away storms, and that the powers of the air, hearing it, may tremble and flee before the standard of the holy cross of the Son of God engraved upon it, etc.—**Elevation or Sanctus bell**, in the *Rom. Cath. Ch.*, a bell rung during the celebration of mass to give notification of the more solemn portions now usually a small hand bell, but in pre-Reformation English churches a large bell often hung in a bell gable erected over the nave immediately above the entrance of the chancel, from which it was rung by one of the acolytes. (*Oxford Glossary*, p. 74.)—**In the bell**, (a) In flower. [*Scotch*] (b) In seed, or having the seed capsules formed, as hops.—**Mass bell**. Same as *sacring bell*.—**Recording bell**, a bell attached to a hand punch, or to an instrument of similar purpose, with which facts collected, as by a conductor, etc., or moneys taken in, as at a bar, are recorded.—**Sacring bell**, a bell rung during the celebration of the Roman Catholic mass, at the elevation of the host, at the Sanctus, and at other solemn services. gans for producing the current of air by which the pipes and reeds are sounded. It consists essentially of an air chamber which can be alternately expanded and contracted, and a nozzle by which the current of air can be directed. When the air chamber is expanded, air is admitted through a valve opening inward. The pressure produced by the contraction of the air chamber closes this valve, and leaves the nozzle the only available avenue of escape for the air in the chamber. Bellows are made in many different forms, a usual one being the small hand bellows, an ornamented example of which is shown in the cut, used for promoting the combustion of a house fire. Bellows of great power are called *blowing machines*, and are operated by machinery driven by steam — *Blindman's bellows*. See *blindman* — *Hydrostatic bellows*. See *hydrostatic*

That is, it is made in a series of small folds, each carried entirely around it in a direction perpendicular to its axis, and having their edges turned alternately inward and outward. The edges of those folds which are turned outward are usually stiffened by a wire frame. When the tube is pulled out to its full extent, its walls are flat, when it is contracted, it requires merely the space taken up by the folds of its material. In use, the back of a camera of this form can be fixed, by a screw or other device, at any distance from the front or lens end, within the limits of the contracted or expanded tube, that the focus of the lens or the particular work in hand may require

An architectural screen (*iconostasis*) with a curtain (*amphitrya*) at its doors, or, as was the case especially in early times, a curtain only separates the bema from the body of the church. On either side of the bema are the parthenon, called respectively the *prothesis* and the *diaconicon*. These regularly communicate with the bema, and in poor churches often have little more than an indication of separation from it. Rubrically they are often counted as part of the bema.

The Jewish type, which, if anywhere, prevails in the Eastern Church, requires a fourfold division: the Holy of Holies answering to the *bema*, the Holy Place to the choir, the Court of the Jews to the nave, and that of the Gentiles to the narthex.

3 A step, a rough measure of length employed by the Greeks and Macedonians when stadia were paced off, and not merely estimated by shouting. It was considered to be 2½ feet, which for this purpose are practically identical with English feet. In a late form of the Philitarian (i. e. Pergamenean) system it became an exact measure 2½ feet, but these feet were of the Babylonian cubit, so that the bema was 0.888 meter, according to Lepsius. In the later Jewish system, the bema appears as two royal cubits or 1.054 meters.

II. n. 1. A member of an order of monks founded at Monte Cassino, between Rome and Naples, by St Benedict of Nursia, about A. D. 530. The rules of the order (which was open to persons of all ages, conditions, and callings) enjoined silence and some useful employment when not engaged in divine service. Every monastery had a library, every monk a pen and tablets, and study and the copying of manuscripts were encouraged. The monasteries became centers of learning and the liberal arts, and the name of the order synonymous with scholarship and erudition. The order was introduced into England about A. D. 600, by St Augustine of Canterbury. The oldest establishment in the United States is that of St Vincent's Abbey in Westmoreland county, Pennsylvania, founded by a colony of monks from Bavaria in 1846. There are also different congregations of nuns known as Benedictines, and following the rule of St Benedict, they date from the same time, owing their foundation to his sister, St Scholastica

The *benediction* is given in a different manner by the Oriental Church from that used by the Latins. The Priest joins his thumb and third finger, and erects and joins the other three and is thus supposed to symbolize the procession of the Holy Ghost from the Father alone, and, according to others, to form the sacred letters I H C by the position of his fingers *J M Neale*, *Eastern Church*, i 362, note

When the benediction is pronounced officially by a priest or clergyman, he usually stands with hands uplifted, and the congregation receive it with bowed heads. Illustrations of ancient benedictions are afforded by Gen xiv 80 (a nuptial blessing), Gen xxvii 27-29 (a death bed blessing), Num vi 24-27 (a priestly blessing). The apostolic benediction is that proceeding from the pope, and is either given personally, as at Rome, or by delegation in other parts of the world. benefice (ben-'f-is), n. [*< ME benefice, benefice, < OF benefice, F bénéfice, < LL beneficium, estate granted, L beneficium, a favor, kindness, < beneficus, kind, liberal see benefice*] 1 In *feudal law*, originally, a fee or an estate in lands granted for life only, and held *ex mero beneficio* (on the mere good pleasure) of the donor. Such estates afterward becoming hereditary, the word *feud* was used for grants to individuals and *benefice* became restricted to church livings.

The *Beneficium*, or *Benefice*, an assignment of land by a conquering Teutonic king as the reward or price of military service, is allowed on all sides to have had much to do with this great change from allodial to feudal in the legal point of view. *Mauv, Early Law and Custom, p 346*

2 An ecclesiastical living, a church office endowed with a revenue for its proper fulfillment, the revenue itself. The following terms of canon law are frequently found associated with this word, which is of historical importance. A *benefice* involving no other obligation than service in the public offices of the church is *simple*. If the cure of souls is attached to it, *double*. If with a certain rank attached, *diocesan* or *major*, the two former without rank, *minor*. Thus, a *chantry* was a simple *benefice*, a *prebend* gives the right to only a part of the income of a canonry at attached to a collegiate or cathedral church while the *benefice* is perpetual and has a charge, though there are some (called *manorial* from their being in the hands of the one conferring the office) revocable. The *benefice* is said to be *regular* if held by one qualified to fulfill the duties of the office, *secular* if held by a layman and *in commendam* when in the charge of one commended by the proper authorities until one duly qualified to fulfill its duties is appointed. In the last named case the discharge of the office is provided for at the expense of the holder. (*See abbé*) A *benefice* is received by *election*, for example, by a chapter, or from a *patron*, who is properly said to *present* to it, or is *conferred* by the proper ecclesiastical superior, these nominations, in the Roman Catholic Church, regularly need *confirmation* from the pope. His action may cause a *benefice* to be *reverted* or *affected* (which see), or the collation is made *alternatively*, that is to the pope and regular patron or superior according to the months in which the *benefice* falls vacant, by definite system.

2 A benefaction, a beneficent act or gift. —*Syn. Beneficence, Beneficence, Bounty, Liberality, Generosity, Munificence, Charity, Beneficence, literally well wishing, is expressive of the disposition to do good, hence it easily came to be applied to charitable gifts. Beneficence literally well doing, is the outcome and visible expression of benevolence. It is a strong though general word for active and abundant helpfulness to those*

who are in need. *Benevolence* may exist without the means or opportunity for *beneficence*, but *beneficence* always presupposes *benevolence*. *Bounty* is expressive of kind feeling, but more expressive of abundant giving. *Liberality* is giving which is large in proportion to the means of the giver. *Generosity* adds to the notion of liberality that of largeness or nobleness of spirit in connection with the gift. *Munificence* is giving on a large scale, not restricting itself to necessary things, but giving lavishly. It is the one of these words most likely to be applied to ostentatious or self seeking liberality, but not necessarily so. *Charity*, while having the best original meaning, has come to be a general word, as to gifts, it is what is bestowed upon the poor or needy, but not always with warm or kindly feelings as, official *charity*.

= **Syn 5 Bent, Propensity, Bias, Inclination, Tendency, Proneness, Disposition**, all keep more or less of their original figurativeness. *Bent* is the general and natural state of the mind as disposed toward something, a decided and fixed turning of the mind toward a particular object or mode of action. *Propensity* is less deep than *bent*, less a matter of the whole nature, and is often applied to a strong aptitude toward that which is evil. *Bias* has often the same meaning as *bent*, but tends specially to denote a sort of external and continued action upon the mind as "morality influences men's minds and gives a bias to all their actions," Locke. *Bias* is often little more than prejudice. *Inclination* is a sort of *bent*, a leaning, more or less decided, in some direction. *Tendency* is a little more than *inclination*, stronger and more permanent. *Proneness* is by derivation a downward tendency, a strong natural inclination toward that which is in some degree evil as, *prone*ness to err, to self justification to vice, but it is also used in a good sense. *Disposition* is often a matter of character, with more of choice in it than in the others, but it is used with freedom in lighter senses as, the *disposition* to work, the *disposition* of a plant to climb.

Berkeleyan (berk'le-an), *a.* and *n.* *I. a.* Pertaining or relating to George Berkeley, bishop of Cloyne, Ireland (born 1684, died 1753), or to Berkeleyanism.

The *Berkeleyan* idealism is little more than the easy demonstration that this view (that the world of reality exists quite independently of being known by any knowing beings in it), from a philosophical standpoint, is untenable. *J. C. Sharp*, *Culture and Religion*, p. 185.

II. n. One who holds Bishop Berkeley's system of idealism; one who denies the existence of a material world.

Berkeleyanism (berk'le-an-izm), *n.* The philosophy of Bishop Berkeley. See *Berkeleyan*. He holds that material things exist only in so far as they are perceived, their *esse* is *percipi*. It is by thinking them, and making us think them, that the Divine Being creates the material universe. But Berkeley gives to souls a substantive existence, so they must be created otherwise. The Berkeleyan idealism is intimately interwoven with an extreme nominalism which denies the existence of general conceptions. Berkeley's theory of vision, which in a modified form is now generally adopted by scientific men, is that while we see two dimensions of space, the third is recognized by touch (that is, by the muscular sense), until the eyes become educated to associating certain appearances with certain feelings of touch.

The orig sense of LL *biblia*, the books, is made prominent in ML *bibliotheca*, the Bible, lit a library see *bibliotheca*] 1 The Book, or rather the Books (see etym), by way of eminence, the Scriptures of the Old and New Testaments. The word *bible* is not found in the English version, but the Greek word occurs frequently, being always translated "book" or "books," sometimes indicating the books of the Old Testament. The Bible consists of two parts: the Old Testament, written in Hebrew, containing the Law, the Prophets, and the sacred writings, or Hagiographa, and the New Testament, written in Greek, consisting of the four Gospels, the Book of Acts, the Epistles of Paul and other apostolic writers, and the Apocalypse or Book of Revelation, the only strictly prophetic book which it contains. Roman Catholic writers accept, in addition to these, most of the books contained in the Apocrypha of the King James version, which occur in the Septuagint (see below) and Vulgate, distributed among the other books of the Old Testament. The principal ancient versions of the Bible, or of portions of it, are the *Targums*, a Chaldee or Aramaic paraphrase or interpretation of the more ancient Hebrew Scriptures, the *Samaritan Pentateuch*, a Hebrew version of the first five books of the Old Testament, ancient in its character, and preserved with jealous care among the Samaritans, the *Synagoga*, a Greek version of the Old Testament prepared by Jewish scholars at Alexandria under the Ptolemies, principally in the third century B C, the *Vulgate*, a Latin version of both Old Testament and New Testament prepared by Jerome at the close of the fourth century A D, and the *Peshito*, a Syriac version of the Old Testament

and the major part of the New Testament, probably prepared in the second century A D. Translations were early made into the principal languages of Christendom. The first complete translation into English was that of Wyclif and Nicholas Hereford, about 1382, and the first printed English version was those of Tyndale and Coverdale, 1524-1535. Other important versions are the *Lutheran*, in the German, by Martin Luther, 1521-34, the basis of the Swedish, Danish, Icelandic, Dutch, and Finnish versions, the *Authorized* or *King James*, prepared by a special commission of scholars in England under James I, 1604-11, the *Douay*, a popular name given to a translation into English prepared by Roman Catholic divines, the Old Testament at Douay (1609-10) the New Testament at Reims (1582) and the *Revised*, a revision of the King James Bible prepared by a committee of British and American Protestant divines, the New Testament appearing in 1881 and the Old Testament in 1885. The number of minor versions is indicated by the fact that, since 1804, translations of the Bible or portions of it have been published in upward of 225 languages. Roman Catholics and Protestants differ in the degree of authority which they attach to the Bible. The Roman Catholic Church "receives with piety and reverence all the books of the Old and New Testaments since one God is the Author of each (Council of Trent) but "at the same time it maintains that there is an unwritten word of God over and above Scripture (Cath. Dict.) Protestants generally hold that "the Supreme Judge, by which all controversies of religion are to be determined, and all decrees of councils, opinions of ancient writers, and private spirits are to be examined and in whose sentence we are to rest can be no other but the Holy Spirit speaking in Scripture (Westminster Conf. of Faith)

an essential analytical similarity to a pair of circles, which it also somewhat resembles to the eye. For the purpose of tracing it, it may be defined as the envelop of all the circles having their centers on a fixed ellipse or hyper-

bola, and cutting a fixed circle orthogonally. This circle is called the *focal circle*, because its intersections with the fixed conic are foci of the quartic.

Fig 2

First genus, second division, one real oval. The latter has, besides, two double foci which are the foci of the conic. The perpendiculars from the center of the focal circle to the asymptotes of the conic are tangents of the quartic (See fig 1). The intersec-tions of the focal circle with the quartic are *cyclic points* of the lat-ter. There are three genera of bi-circular quartics. The first embraces all the biserial forms, and these are curves of the eighth class. For these there are two real focal circles and two imaginary ones. The two real conics of centers are an ellipse and a confocal hyperbola. There are four real foci and four real cyclic points. This genus has two divisions. In the first, the four real foci are con-cyclic, and the real curve consists of two ovals one of which lies without or within the other, accord-ing as the four real foci are on a central ellipse or hyperbola. Fig. 1 shows the latter case, and fig. 2, modified so as to make the upper part like the lower, would show the former. Bicircular quartics of this division have the prop-erty that three points can be taken so that the distances r_1, r_2, r_3 of any point of the curve therefrom shall be express-ible by an equation $r_1^2 + r_2^2 + r_3^2 = 0$. The second division of the first genus embraces curves whose four real foci lie in two pairs on two focal circles. These real curves consist of single ovals, as in fig. 2. The second genus comprises unicursal curves with one node (besides those at the circular points). They are of the sixth class. There is one real and one imaginary focal circle. The node may be a cuspoid with an outloop (shown by slightly modifying fig. 2 in the upper part) or with an in-loop as in fig. 3 or it may be an ac-node without or within the oval. The third genus contains curves with an ordinary cusp. The size of the fourth class. There is but one focal circle and but one focus. The cusp may point out-ward as in fig. 4 or inward, as in a modification of fig. 3.

greatly increasing the relative size of the driving wheel and bringing the rider directly over it. Later the "safety" bicycle was introduced, in which the wheels were made of equal or nearly equal size, and for the direct action upon the front wheel was substituted indirect action upon the rear wheel, by means of a chain and sprocket-wheels, the diameters of the sprocket wheels being so proportioned as to compensate the decrease in size of the driving wheel. Bicycles having seats and driving gear for several riders placed one behind the other are called *tandems* — a name often restricted to such a bicycle for two riders. As directed in the 56th canon of the Church of England, this is a form in which the preacher calls on the congregation to pray for the church catholic, the sovereign, and different estates of men. The needle, bar, disk, or other body which the couple to be measured is to turn is suspended at equal distances from and on opposite sides of its center of gravity by two equally long threads from two fixed points on one higher level. Thus under the influence of gravity alone, the suspended body comes to equilibrium with the two threads in a vertical plane. When it is turned through any angle about a vertical axis through its center, its weight tends to restore it to its original position, and the moment of this force of restitution can be accurately calculated from the lengths of the threads, the distances of their attachments, and the weight of the suspended body. This moment increases with the angle of displacement up to 90°, consequently if the force to be measured is not too great, it will, when it is applied, bring the suspended body to equilibrium in a new position, the inclination of which from the old position being observed affords the means of calculating the magnitude of the force

Where these elements of knowledge and of formality are wanting, the second marriage is still generally invalid, but not bigamous in the criminal sense

Formerly in the United States the game was played with four balls on a table having six pockets, the players scoring both for caroms and for driving the balls into the pockets (See *carom*) This is nearly the present *English game* Since, however, expert players could continue an inning at the game thus played almost without limit, the pockets were dispensed with and counting was made to depend entirely upon caroms Later, professional players adopted what is known as the *French game* in which only three balls are used, and this was modified to the *championship game*, in which a line, called a *ball line*, is drawn crossing each corner of the table diagonally, within which two counts only can be made Experts now play also *cushion caroms*, in which the cue ball must touch the cushion before hitting the second object ball, or hit the second ball again on a return from the cushion, the *bank line game*, which is the same as the *championship game*, but with bank lines 14 inches from the cushion all round the table, and the *bank game*, in which the cue ball must hit the cushion before touching any other ball [The singular form, *billiard*, is occasionally used, and is always employed in composition]

The generic word is always written first and with a capital initial letter. It is, or is taken as a noun. The specific word follows, and is usually an adjective, or used adjectively (though it may be a noun. In zoology the practice is now to write all specific words with a lower case (or small) initial, though substantive and personal and geographical words are often written with a capital, which is the common practice in botany. Hence — (*b*) (consisting of two names as, *binomial* terms. Also *binominal* — **Binomial coefficient**, the numerical coefficient of any term in the development of $(x + y)^n$ where *n* is any whole number. **Binomial development**, a development by the binomial theorem — **Binomial equation**, an algebraical equation consisting of two terms as, $ax^2 + bx - c = 0$. **Binomial theorem**, the theorem invented by Sir Isaac Newton for raising a binomial to any power, or for extracting any root of it by an approximating infinite series. According to this theorem, we have

$(x + y)^2 = x^2 + 2xy + y^2$
 $(x + y)^3 = x^3 + 3x^2y + 3xy^2 + y^3$
 $(x + y)^4 = x^4 + 4x^3y + 6x^2y^2 + 4xy^3 + y^4$, or, in general,
 $(x + y)^n = x^n + nx^{n-1}y + \frac{n(n-1)}{2}x^{n-2}y^2 + \frac{n(n-1)(n-2)}{6}x^{n-3}y^3 + \dots$

II. n. 1. In *alg.*, an expression or quantity consisting of two terms connected by the sign + or —, denoting the sum or the difference of the two terms as, $a + b$, $a - 2c$, $a^2 + b$, $x^2 - 2\sqrt{y} - 2$. In *zool* and *bot.* a name consisting of two terms, generic and specific, as the proper name of a species, the generic always preceding the specific word as, *Felis leo*, the lion

It is remarkable that each of these writers [Treviranus and Lamarck] seems to have been led, independently and contemporaneously, to invent the same name of *biology* for the science of the phenomena of life. And it is hard to say whether Lamarck or Treviranus has the priority. Though the first volume of Treviranus' *Biologie* appeared only in 1802, he says "that he wrote the first volume about 1780." The *Recherches*, etc., in which the outlines of Lamarck's doctrines are given, was published in 1802.

The word *quartic* has now completely superseded *biquadratic*, except in the following phrases—**Biquadratic equation**, an equation with one unknown quantity the highest power of which contained in the equation is the fourth. Biquadratic equations are always susceptible of algebraic solution, equations of higher degrees are generally capable only of numerical solution.

See the nouns. **Biquadratic parabola**, in geom, a curve line of the third order, having two infinite legs tending the same way. **Biquadratic root** of a number, the square root of the square root of that number. In math, an imaginary quaternion, a quantity expressible in the form $a + bi + cj + dk$ where i, j, k are three mutually perpendicular vectors, and a, b, c, d are real or imaginary numbers. This is the sense in which Sir W. R. Hamilton used the word. He distinguished such a quantity from a real quaternion, because the whole algebraic procedure with imaginary quaternions is different from and more difficult than that with real quaternions, instead of being essentially the same but more easy as in the case with ordinary imaginary algebra as compared with real algebra.

2. The ratio of two rotors. This meaning was given to the word by W. K. Clifford, who conceived that Hamilton's biquaternions did not deserve a separate name. In this sense a biquaternion is the sum of two quaternions belonging to different systems, so that their product vanishes.

A tree or shrub belonging to the genus *Betula* (which see). The birches have smooth, laminated outer bark and close grainy wood, which in some species is hard and tough, taking a fine polish, and is used in the manufacture of furniture and for many other purposes. The white, gray, or poplar birch, *Betula alba*, the principal European species, is a small tree, but is put to many uses especially in the old world. The bark is used for tanning and thatching, and yields an oil which is said to be used to give Russia leather its peculiar odor, spruce oil is also used for this purpose. The leaves, as well as the sap and oil, are used in the treatment of various chronic diseases, and the wood is used for fuel and many other purposes. Several varieties of this species, as the weeping, cut-leaved, and purple birches, are much cultivated for ornament. The canoe or paper birch of

North America, *B. papyrifera*, is a large tree with a very tough, durable bark, which is largely used by the Indians in the manufacture of canoes and tents. The timber is valuable. The yellow or gray birch, *B. lutea*, is one of the most important deciduous trees of the northern Atlantic forests, growing to a very large size, its wood is heavy, very strong, and hard. The black, sweet, cherry, or mahogany birch, *B. lenta*, has a very spicy, aromatic bark, yielding a volatile oil identical with oil of winter green, and its heavy, dark colored wood is largely used for making furniture and in ship building. Other prominent species are the red or silver birch, *B. nigra*, of the Southern States, and the black birch, *B. occidentalis*, of the Rocky Mountains and westward. Several shrubby species are widely distributed in mountainous and arctic regions, reaching a higher latitude than any other deciduous tree, as the alpine birch (*B. nana*), the low or dwarf birch (*B. pumila*) and the scrub birch (*B. glandulosa*).

2 In the earliest usage of the Christian church, a spiritual overseer, whether of a local church or of a number of churches, a ruler or director in the church. See *elder* and *presbyter*

Paul and Timothy to all the saints in Christ Jesus which are at Philippi, with the bishops and deacons, Philip i 1

The English version has hardly dealt fairly in this case with the sacred text, in rendering *ἐπίσκοπος*, verse 28 (Acts xx) 'overseers' whereas it ought there, as in all other places, to have been 'bishops' that the fact of elders and bishops having been originally and apostolically synonymous might be apparent to the ordinary English reader, which now it is not

Dean Alford Greek Test, Acts xx 17

Bishops and *Presbyters*, literally overseers and elders, are universally admitted to be terms equivalent to a considerable extent, and often at least applied to the same officers Smith Student's Eccles. Hist., p 176

3 From an early time, an overseer over a number of local churches, particularly, in the Greek, Oriental, Roman Catholic, and Anglican churches, the title of the highest order in the ministry. See *episcopacy*. The origin of the office of bishop in the Christian church is a matter of dispute. The terms *bishop* and *presbyter* appear to be used interchangeably in the New Testament, but those who support the episcopal form of government maintain that while these terms were not yet limited to their later meanings a difference of rank was indicated by them that the office of the apostles as overseers over the local churches and their pastors, was episcopal in its nature and that the term *bishop* is appropriately used to designate those whom they ordained as their successors in an office which was intended to be permanent while those who reject the episcopal form of government hold that the apostolic office was purely personal and that the apostles had not and could not have successors. The Roman Catholic church, the Greek and other Oriental churches, and the Anglican church claim an unbroken succession of bishops from apostolic times. Moravian bishops also claim an unbroken episcopal succession, but exercise jurisdiction not as diocesan but jointly. The first Methodist superintendent of the title afterward superseded by *bishop*, was ordained by Wesley in 1784 (See *itinerant bishop*)

In the Greek Oriental, and Roman Catholic churches the different grades of the office, besides *simple* or *ordinary* *bishop* are *archbishop*, *metropolitan*, *primate*, *exarch*, and *patriarch*, these were ecclesiastically instituted for convenience of government (See *pope*). The Anglican church also has archbishops and metropolitans. By virtue of concordats the nomination of Roman Catholic bishops is sometimes made by the temporal power, the former election by the clergy remains in some cathedral chapters, but more commonly names are proposed by the fellow suffragans and metropolitans and by the clergy of the diocese to be provided for, to the Pope who directly appoints and in any case confirms the new bishop. In England bishops are nominated by the sovereign, who upon request of the dean and chapter for leave to elect a bishop, sends a *compté d'élire*, or license to elect with a letter missive, nominating the person whom he would have chosen. The election, by the chapter, must be made within twelve days or the sovereign has a right to appoint whom he pleases. In the Protestant Episcopal Church in the United States the bishops are elected by the clergy and laity. Bishops are said to be *consecrated* rather than *ordained*. *Enthronization* is the solemn installation following the consecration. A bishop changed from one see to another is said to be *translated*, the church containing his cathedral or episcopal throne is called *cathedral*, and the local jurisdiction indicated by this throne and the city or locality in which this stands, together with the diocese or territory attached to it, his *see*, to which he is said to be *added*, and which is *voided* when deprived of him. This relation is symbolized by the bishop's ring, which in the Western Church is a part of the insignia of his office, together with the mitre, staff and cross. To this office also are applied the term *pontif* and its derivatives. Twenty four of the English bishops and the two archbishops are peers of the realm with seats in the House of Lords, and certain political and judicial or quasi judicial functions. In the Mormon Church the bishop is an officer of the Aaronic or lesser priesthood presiding over it, ministers in outward ordinances, conducts the temporal business of the church and acts as judge on transgressors. Often abbreviated *Bp*. See *choripiscopus* and *vicar apostolic*

bismuth (biz'muth), *n.* [= F *bismuth*, \langle G *bismuth*, now commonly *wismut*, *wismuth*, orig. *wismuth*, of mod (17th century) but unknown origin.] Chemical symbol, Bi, atomic weight, 208; specific gravity, 9.6 to 9.8. A metal of a peculiar light-reddish color, highly crystalline, and so brittle that it can be pulverized. Its crystalline form is rhombohedral, closely approximating that of the cube. It occurs native in imperfect crystallizations, flinty shapes, and disseminated particles, in the crystal line rocks, also as a sulphuret, and in combination with tellurium and some other metals, and in various oxidized combinations. The native metal and the carbonate (bismutite) are the chief important sources of the bismuth of commerce. Until recently, almost the entire supply of the metal came from Schneeberg in Saxony, where it occurs in combination with ores of cobalt, arsenic, and silver. Nearly all the bismuth of commerce contains at least a trace of silver. Bismuth is a remarkable metal in that its specific gravity is diminished, instead of being increased, by pressure. It is the most diamagnetic of the metals. It fuses at a comparatively low temperature (507°), and is volatilized at a white heat. Alloys of bismuth with tin and lead fuse at a temperature considerably less than that of boiling water. (See *Newton* and *Rose's metals*, under *metal*.) Alloys of the same metals with the addition of cadmium fuse at still lower temperatures,

one prepared by Lipowitz remains perfectly fluid at 140°. These alloys have been used to some extent for clichés and for stereotyping, but are now of little practical importance. The chief uses of bismuth are as a medicine and as a cosmetic. For these purposes it is prepared in the form of the subnitrate called in the old pharmacoputical language *magisterium bismuthi*. The cosmetic in preparing which the basic chlorid has also been employed, is known as pearl powder or blanc d'Espagne. Bismuth has of late years been much experimented with as a possible component of useful alloys, for several of which patents have been issued, but no one of these alloys is known to have come into general use. Bismuth has also been used to a limited extent in the manufacture of highly refractive glass, and of alloys (which see). It is used with antimony in the thermoelectric pile or battery. (See *thermo electric*.) It has also begun to be used to some extent in the manufacture of porcelain, for the purpose of giving to its surface a peculiar colorless, lustrous lustre, which can also be had of various colors when other metals are used in combination with the bismuth. This metal is one for which the demand is extremely fluctuating but on the whole increasing, and, as its ores have nowhere been discovered in large quantity, its price has been more variable than that of any other metal, with the possible exception of nickel, running between 55 cents and \$5 a pound. The total consumption of the metal is probably between 2, and 50 tons a year, and it comes chiefly from the Erzgebirge (between Saxony and Bohemia), France, South America, and New South Wales. It was called by the alchemists, while in their uncertain condition of knowledge as to its nature, by various names, as *marcasita*, *argentea plumbum canerum*, *stannum canerum*, etc., also called formerly in French *étain de glace*, corrupted in English into *tin of glass*. — **Bismuth-blende**, the mineral culytite (which see). — **Bismuth-glance**, an ore of bismuth. — **Prismatic bismuth glance** is a sulphid of bismuth or bismuthinite, and *arsenical bismuth glance* is the same as *needle ore* or *arsenite*. — **Bismuth ochre**, the mineral bismite. — **Bismuth silver**. It formerly extended into some of the Atlantic States, as Virginia, the contraction of the area of its habitat and the reduction of its numbers have gone on steadily with the advance of European occupation, the construction of the Union Pacific railroad cut the great herd in

two, leaving a southern or Texan herd, chiefly in the region of the Staked Plains, and a northern or Yellowstone or Saskatchewan herd in the region of the upper Missouri and northward. The animal resembles the aurochs (which see), but is considerably smaller, the hump is very high and large, the hind quarters are light, the tail is about

plied to those years which have 366 days, the extra day being inserted in the month of February. See *bisextus*. This occurs every fourth year, taken as each year of which the number is divisible by 4 without remainder. Inasmuch, however, as a year of 365 days exceeds the true length of a solar astronomical year by 11 minutes and 14 seconds, amounting to an error of a day in 128 years. It was provided in the Gregorian calendar that the intercalary day should be omitted in all century years except those which are multiples of 400.

II. A leap-year (which see)

bisextus (bi-sek'stus), *n* [L. *see bisext*, and of *bisextile*] The extra or intercalary day inserted by the Julian calendar in the month of February every fourth year, in order to make up the six hours by which (it was reckoned) the natural or solar year exceeds the common year of 365 days. This extra day was provided for by reckoning twice the sixth day before the calends (or first) of March (or the sixth day from the calends of March both days included reckoning backward from the succeeding month, as was the custom of the Romans) the 'sixth' (or first sixth) day proper thus corresponding to February 25th, according to our reckoning and the extra sixth or second sixth, to our February 24th. Since 1662 when the Anglican liturgy was revised, the 29th day of February has been more conveniently regarded as the intercalated day in all English speaking countries. In the ecclesiastical calendars of the countries of continental Europe, however, the 24th day of February is still reckoned as the bisextus or intercalary day.

It was a crime answering to treason in our own time, and was carefully defined and rigorously punished by the Mo-
saiic laws. It was of this crime that Jesus was accused, and for it condemned, because he assumed the divine character and accepted divine honors.

For a good work we stone thee not, but for blasphemy and because that thou, being a man, makest thyself God John x 33

Hence—2 Any impious or profane speaking of God or of sacred things, reproachful, contemptuous, or irreverent words uttered impiously against God or religion

Blasphemy is an injury offered to God, by denying that which is due and belonging to him, or attributing to him that which is not agreeable to his nature Linwood

Blasphemy cognizable by common law is described by Blackstone to be "denying the being or providence of God, contumelious reproaches of our Saviour Christ, profane scoffing at the Holy Scripture, or exposing it to contempt or ridicule", by Kent as "maliciously reviling God or religion", and by Chief Justice Lemuel Shaw as "speaking evil of the Deity with an impious purpose to derogate from the Divine Majesty, and to alienate the minds of others from the love and reverence of God. Blasphemy is punished as a crime or a misdemeanor by the laws of many nations. In the Roman Catholic Church, language irreverent toward the Virgin Mary and the saints is also held to be blasphemous

3 Evil speaking or abusive language against anything held sacred as, "blasphemy against learning," Bacon, Advancement of Learning, 1 (Latham)—4. An indecent or scurrilous utterance, as distinguished from fair and respectful discussion; grossly irreverent or outrageous language

=Syn Blasphemy, Profanity, agree in expressing the irreverent use of words, but the former is the stronger and the latter the wider. Profanity is language irreverent toward God or holy things, covering especially all oaths that literally interpreted, treat lightly the attributes or acts of God. Blasphemy is generally more direct, intentional, and defiant in its impudency, and is directed toward the most sacred things in religion

blizzard (bliz'ard), *n* [An expressive word, originating in the United States, appar. at first locally on the Atlantic coast (see first quot.), and carried thence to the West, where, in a new application, it came into general notice and use in the winter of 1880-81. The word is evidently a popular formation, and is prob. based, with the usual imitative variation observable in such formations, on what to the popular consciousness is the common root of *blaze*, *blast*, *blow* (the latter notions at least being appar. present in the familiar third sense). In the orig. sense a blizzard is essentially a "blazer," of which word, indeed, it may be considered a manipulated form. See *blaze*, and cf. *blaze*, *blast*, *bluster*] 1 [Appar. the earliest sense, but not recorded, except in the figurative use, until recently.] A general discharge of guns, a rattling volley, a general "blazing away." See *extrat*

Along the Atlantic coast, among the gunners who often hunt in parties stationed near together behind blinds, waiting for the flocks of migratory birds, the word *blizzard* means a general discharge of all the guns, nearly but not quite together—a rattling volley differing from a broadside in not being quite simultaneous. This use of the word is familiar to every longshore man from Sandy Hook to Cherrituck, and goes back at least forty years, as my own memory attests. The longshore men of forty years ago were all sailors, and many of them had served in the navy. That they may have learned the word there is rendered probable by the rather notable accuracy with which they always distinguished between a *blizzard* and a broadside. This points to a nautical origin of the word, though it made no progress in general use till it struck the Western imagination as a term for that convulsion of the elements for which "snow storm," with whatever descriptive epithet, was no adequate name, and the keen cut of the newspaper's reporter caught it and gave it currency as a reported English.

A. J. *Edmunds Post*, March 24, 1887

Hence—2 Figuratively, a volley, a sudden (oratorical) attack, an overwhelming retort. [This seems to be the sense in the following passage, where Bartlett explains the word (not known in the Eastern States, he says) as "a pucker"]

A gentleman at dinner asked me for a toast, and supposing he meant to have some fun at my expense, I concluded to go ahead and give him and his likes a *blizzard*. *David Crockett*, *Town Down East*, p. 16

3 A gale or hurricane accompanied by intense cold and dry, driving snow, common in winter on the great plains of the States and Territories of the northwestern United States east of the Rocky Mountains, especially Dakota, and in Manitoba in British America. It is described in the "American Meteorological Journal" as "a mad rushing combination of wind and snow which neither man nor beast could face."

Whew! how the wind howls there must be a terrible blizzard west of us, and how ill prepared are most frontier homes for such severe cold. *Chicago Tribune*, Jan. 8 1880
